Velanzo — how to use it

For the owner, the shops and the warehouse. Every screen, with a picture.

1. How Velanzo works

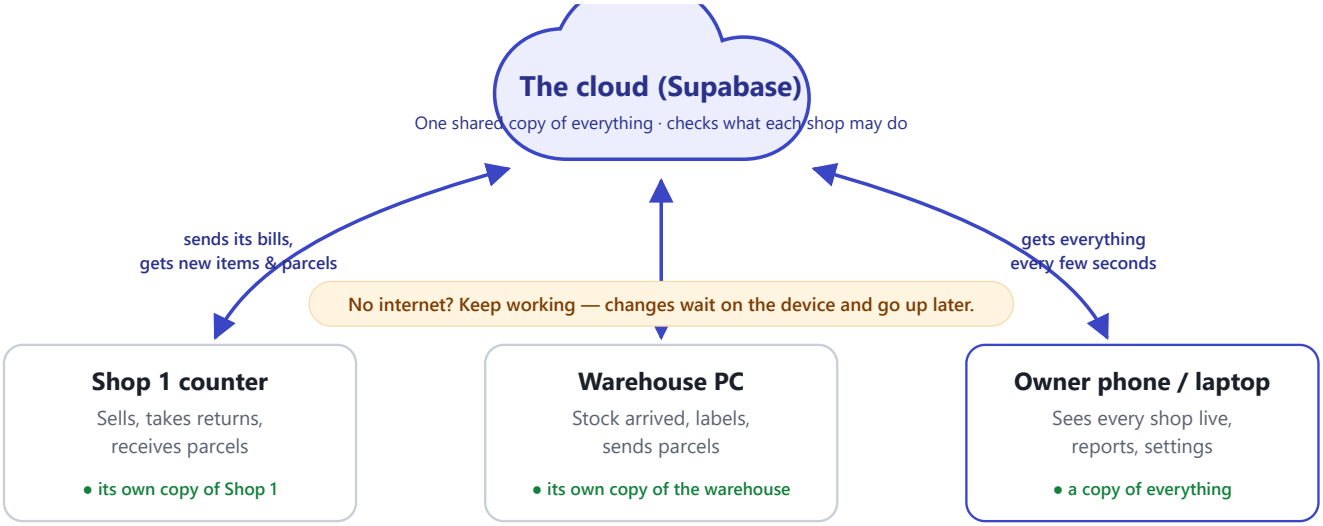

Velanzo follows your stock from the supplier to the customer. The warehouse enters what arrives, puts a barcode label on every piece and sends parcels to the shops. The shops receive the parcels, scan items to make bills, and take returns. Everything is recorded on its own, so the owner sees every shop and the warehouse at any time — on a laptop or a phone.

#	STEP	WHO	WHERE IN VELANZO
1	Stock comes from a supplier	Warehouse	Stock arrived
2	It is added to the warehouse stock	—	automatic
3	A barcode label goes on every piece	Warehouse	Labels
4	A parcel is packed and sent to a shop	Warehouse	Send stock
5	The shop checks the parcel and receives it	Shop	Receive stock
6–8	Items are scanned, paid and a bill is printed	Shop	Sell

Every computer keeps its own copy

Each shop counter, the warehouse computer and the owner's phone keep their own copy of what they need, and the cloud keeps one shared copy of everything. When there is no internet, **keep working**: the bills and changes wait on that computer and go up to the cloud by themselves when the internet is back. No computer has to stay on at night.

Who can do what

The owner decides what each shop and the warehouse may do with on/off **switches** (Settings → Shops & warehouse). Each person can then have fewer switches than their place (Settings → People). A shop's people only see that shop. Only what is switched on appears on their screen — and the cloud itself refuses anything that is switched off.

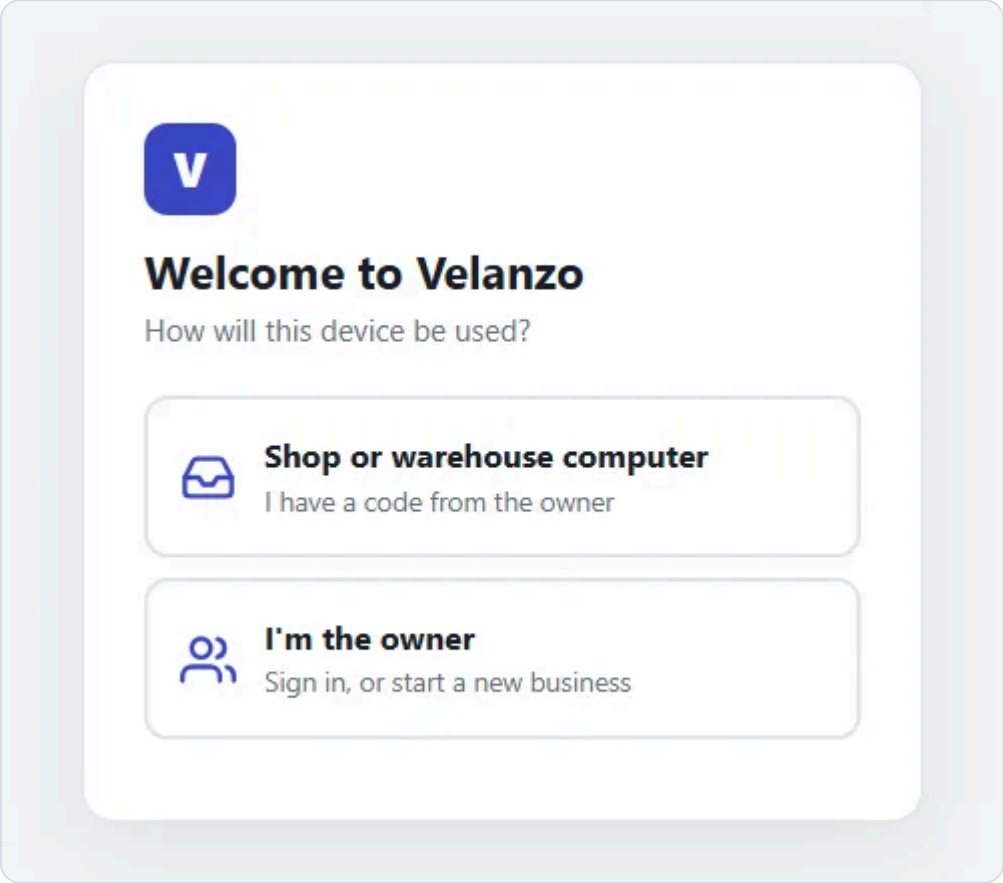

SWITCH	A SHOP (USUAL)	THE WAREHOUSE (USUAL)
Sell and print bills · Returns and exchanges · Give discounts	On	Off
Change prices on a bill · Cancel bills	Off	Off
Receive stock	On	On
Buy from suppliers · Send stock · Add new items and print labels · Correct stock counts	Off	On
Record expenses	On	On
See cost price and profit · See reports for this place	Off	Cost on

Example: to stop a shop buying from suppliers itself, keep **Buy from suppliers** off for that shop. To let one trusted shop manager cancel bills, switch **Cancel bills** on for the shop, then off for the other people there.

2. Starting (owner, once)

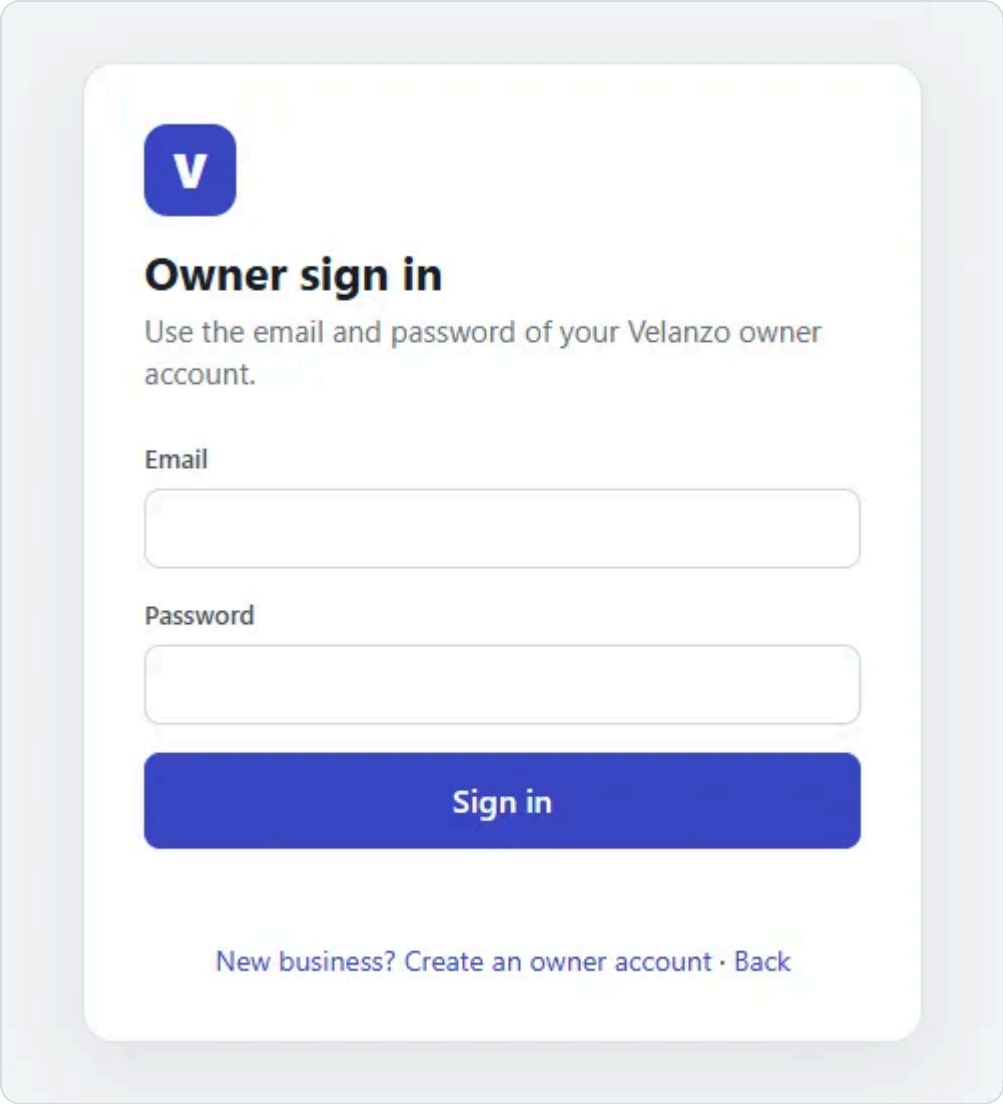

Open your Velanzo address in Google Chrome or Microsoft Edge (for example **https://yourname.github.io/velanzo**). The same address works on every computer and phone.

2.1 Your owner account

The first screen on a new computer or phone.

1. Choose **I'm the owner**.
2. The very first time: click **New business? Create an owner account**, type your email and a password (at least 8 characters). If an email arrives, open its link, then come back and sign in.
3. Type your business name, your name and choose a **PIN** (4 to 6 numbers). You type this PIN to open Velanzo, like a phone.

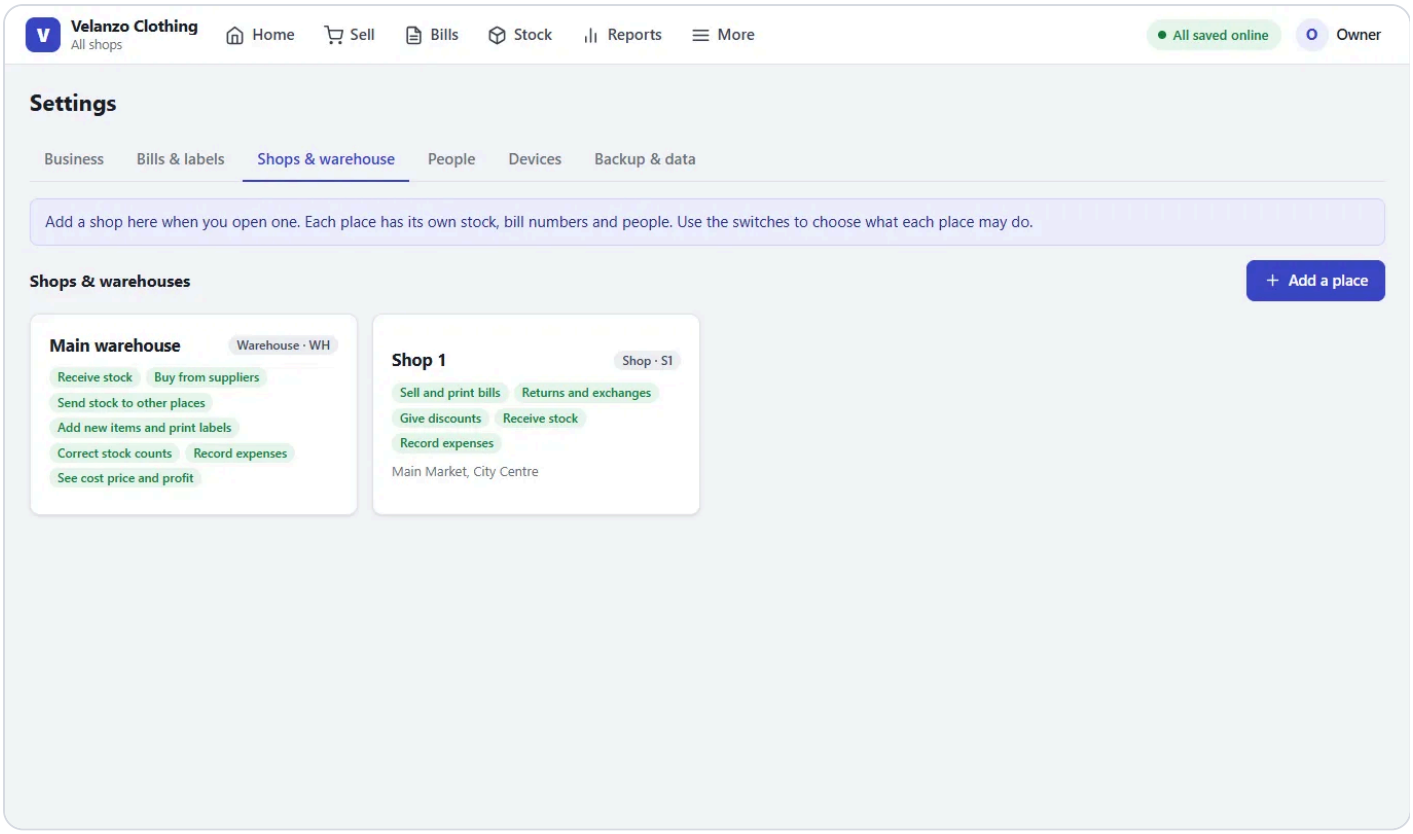

On your next phone or laptop, just sign in with the same email and password.

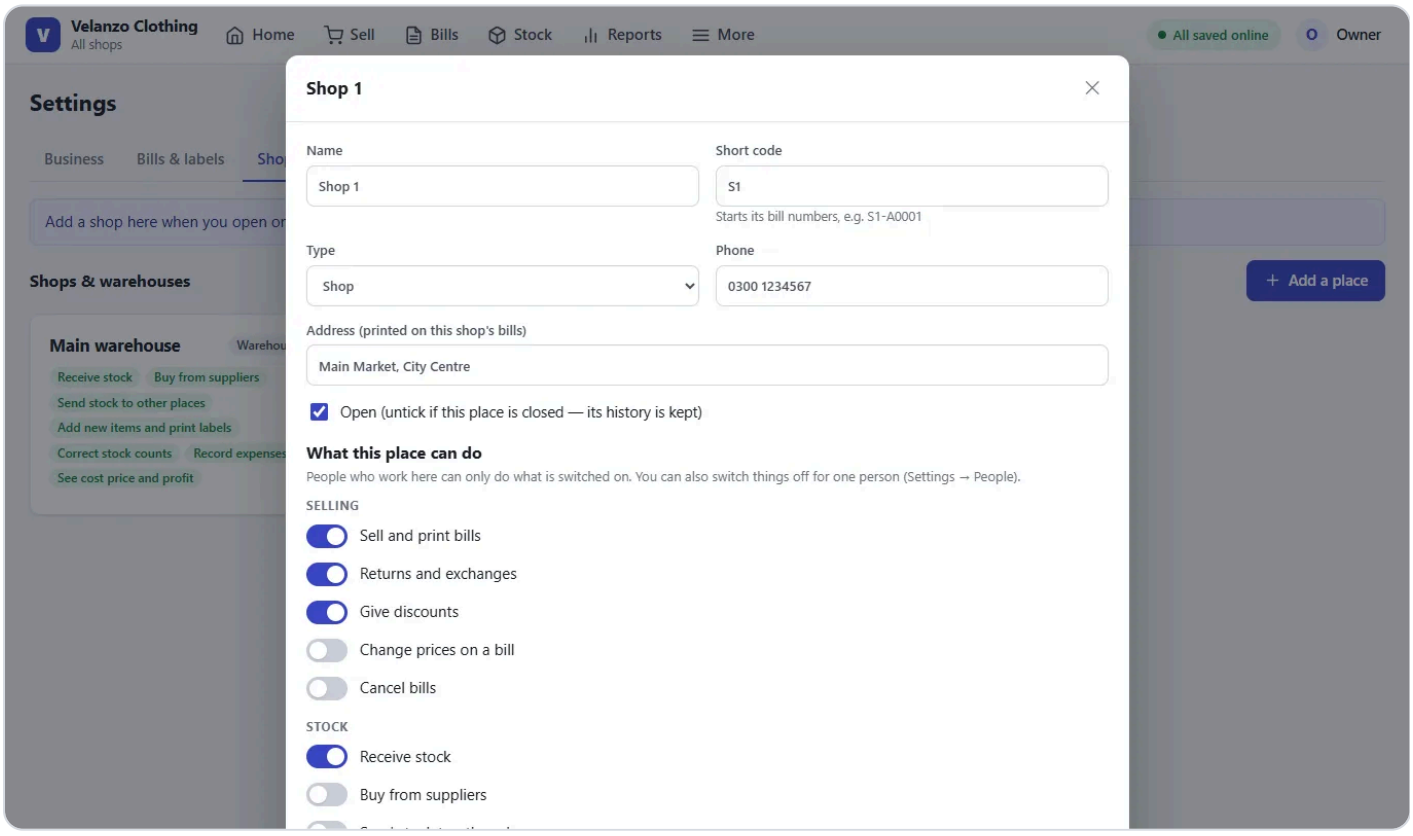

Keep your email and password safe. They open Velanzo as the owner on any new phone or computer. Your PIN only works on devices that are already set up.

2.2 Shops and their switches

More → Settings → Shops & warehouse. Velanzo starts with **Main warehouse** and **Shop 1**. Rename them, add their address and phone (printed on their bills), and add more shops when you open them.

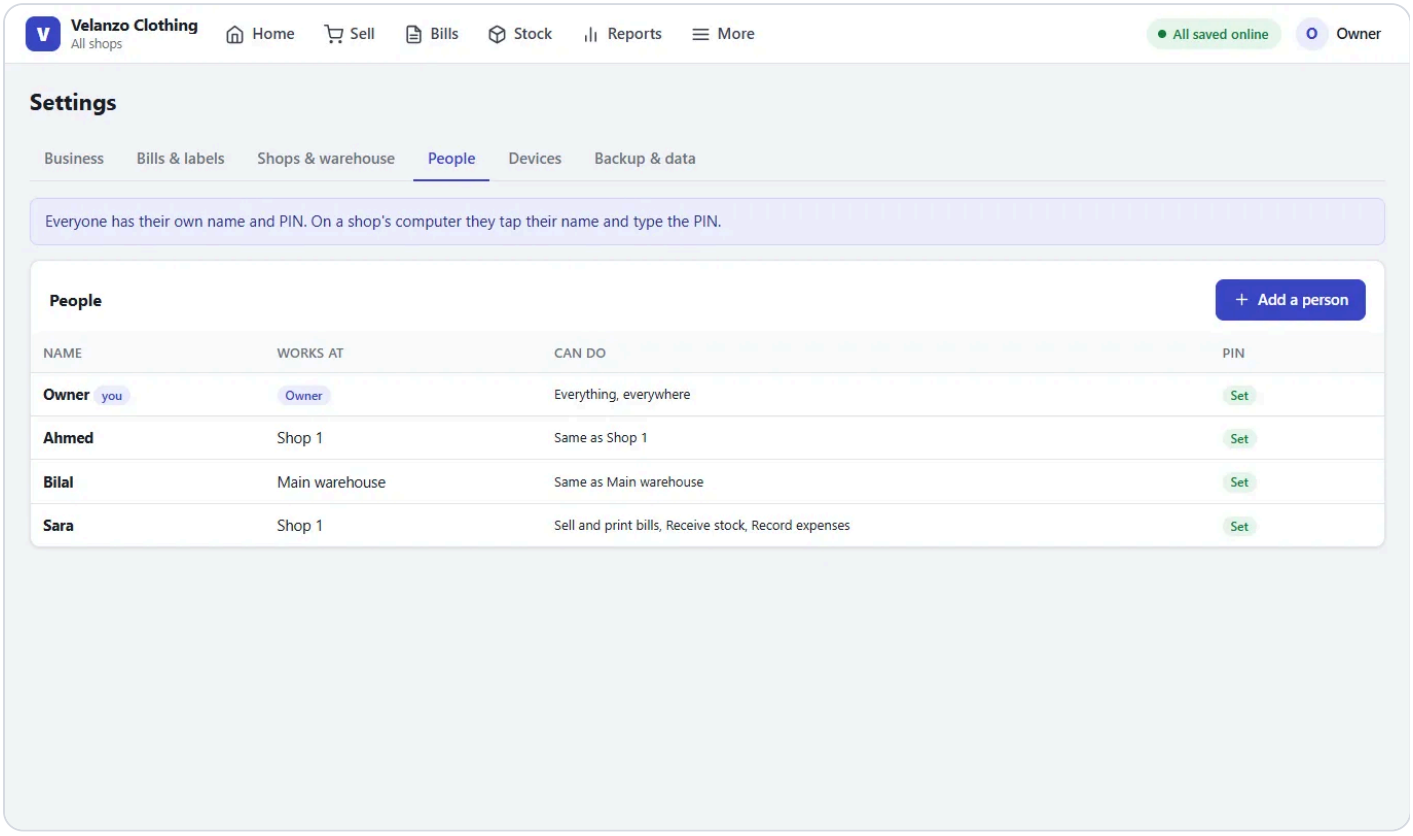

Each card shows what that place may do.

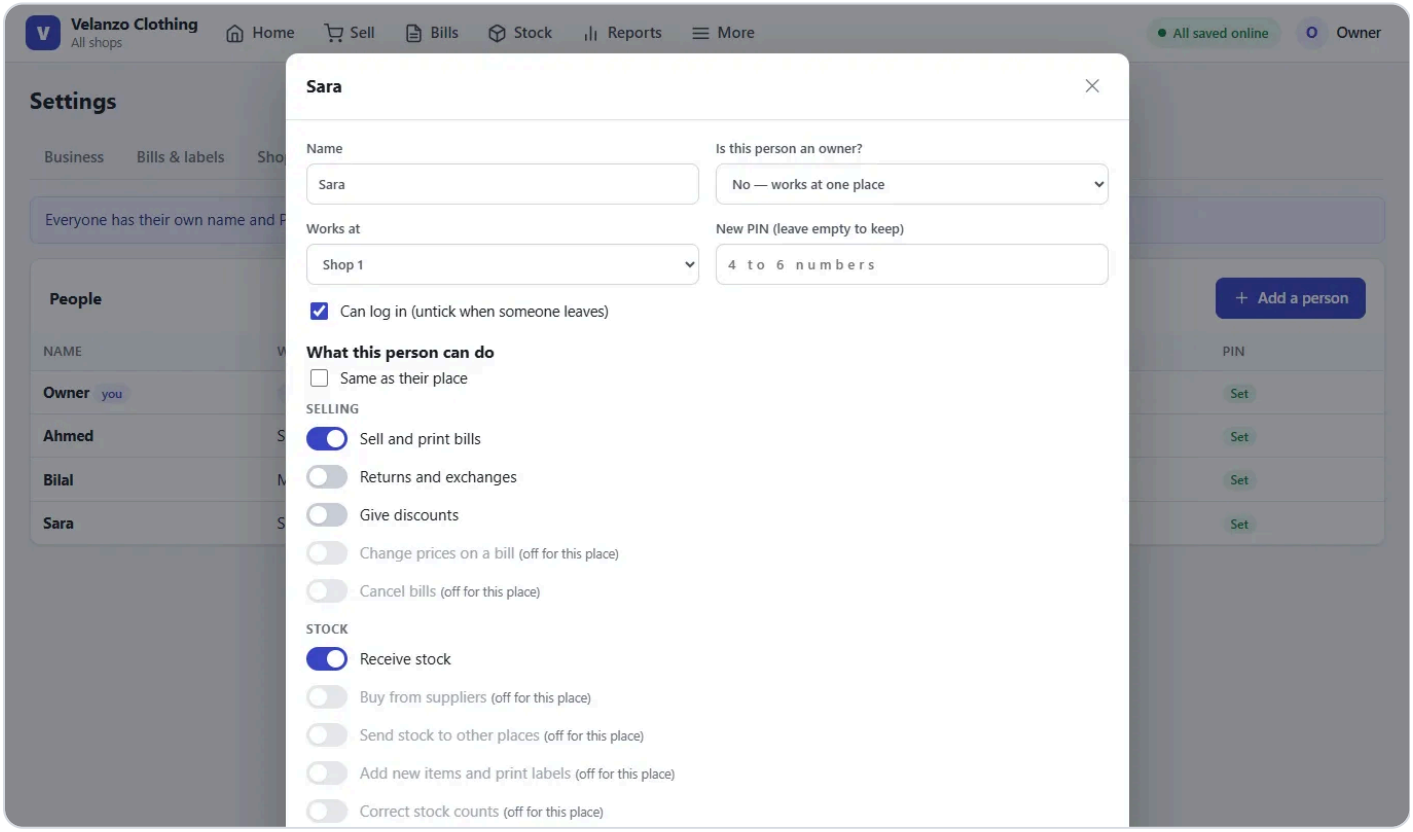

Click a place to change its name, code and switches. The short code starts its bill numbers.

2.3 People and PINs

Settings → People → Add a person: their name, where they work and a PIN (tell them the PIN).
Leave **Same as their place** ticked, or untick it to switch some things off for this person only.

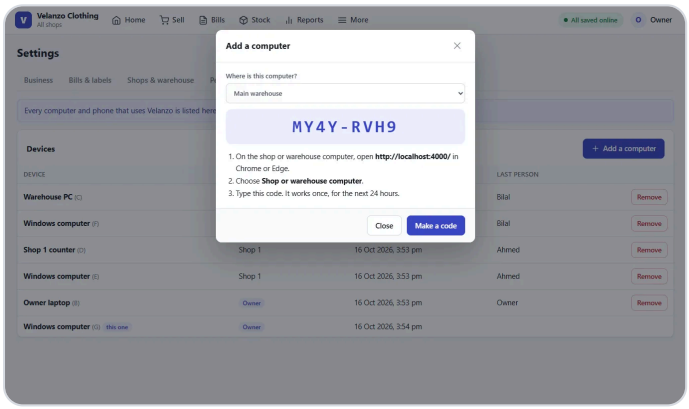

Sara may sell and receive, but not give discounts or take returns. Grey switches are off for the whole shop.

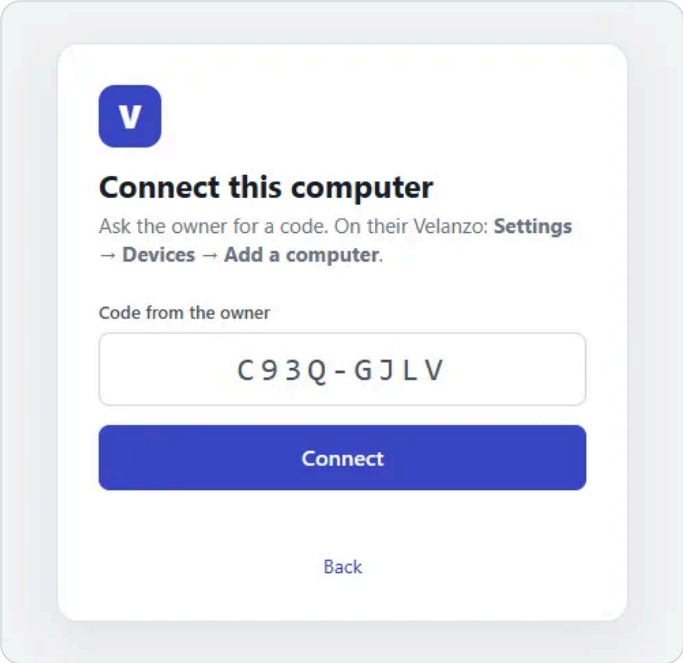

Someone leaves? Open them and untick **Can log in**. Their history stays. **Forgot a PIN?** Open the person and type a new PIN.

2.4 Connect the shop and warehouse computers

1. On your own Velanzo: Settings → Devices → Add a computer. Choose where the computer is and click **Make a code**.
2. On the shop or warehouse computer, open the Velanzo address, choose **Shop or warehouse computer** and type the code. It works once, for 24 hours.
3. Velanzo downloads that place's items and stock, then shows **Who's working?**.

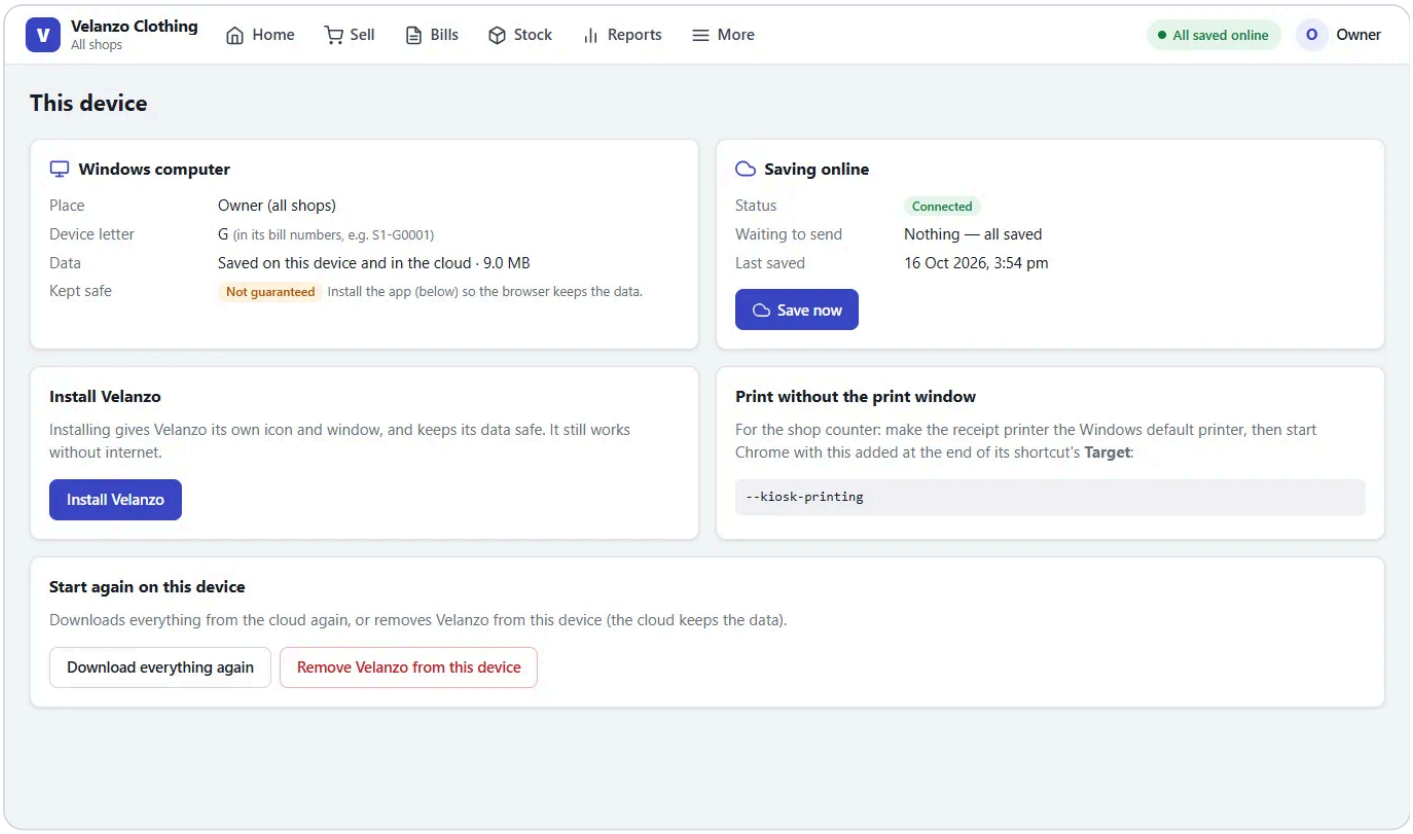

The code for one computer.

Typing it on the shop computer.

2.5 Install Velanzo on every computer

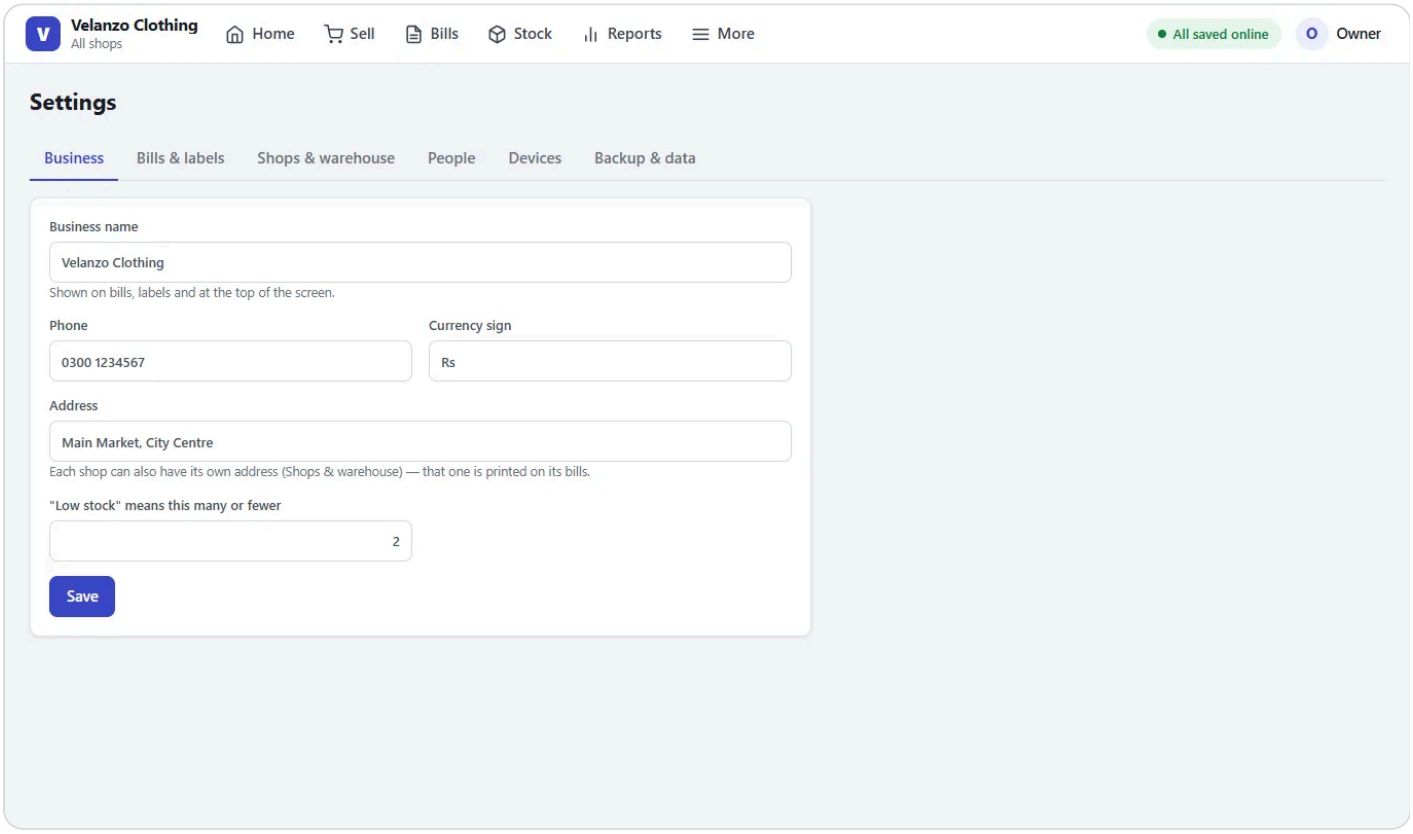

Installing gives Velanzo its own icon and window and tells the browser to keep its data safe. In Chrome or Edge open the menu ⋮ and choose **Install Velanzo** (or **Apps** → **Install**). On a phone: **Add to Home screen**. You can also use the **Install Velanzo** button on your name → This device.

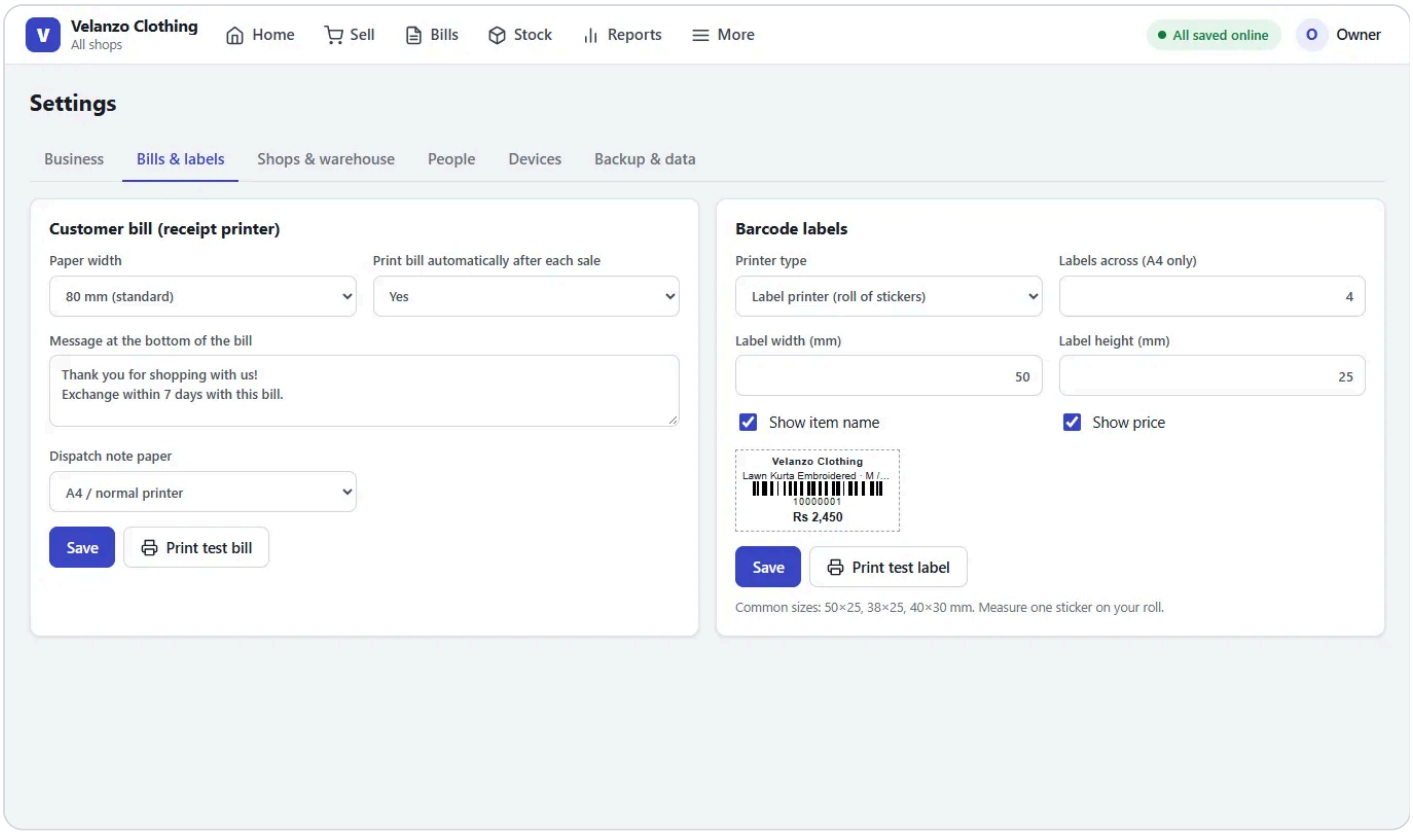

This device: is everything saved online, install, and printing tips.

2.6 Business details and printing

Settings → Business: name, phone, currency and when an item counts as "low stock".

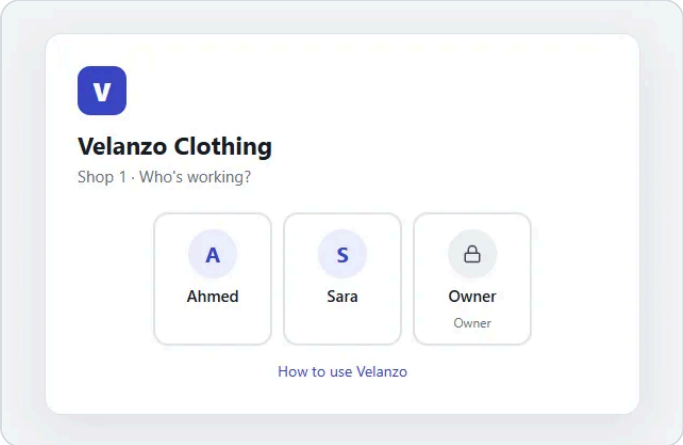

Settings → Bills & labels: receipt width (80 or 58 mm), the message at the bottom of the bill, and your label size. Use **Print test bill** and **Print test label** to check.

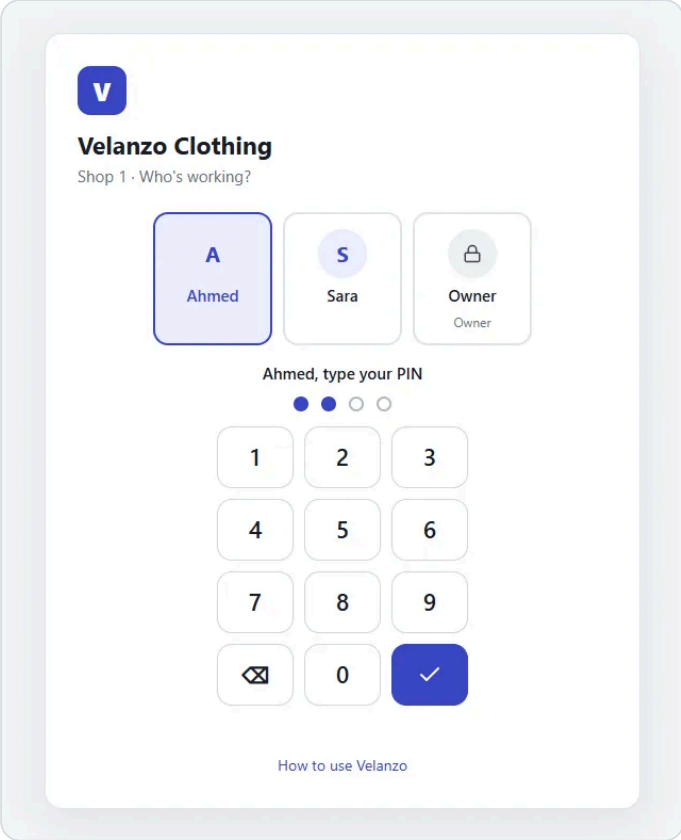

3. Opening Velanzo every day

Open Velanzo, tap your name and type your PIN. When someone else takes over the counter: **your name (top right) → Switch person**.

Only the people of this shop (and the owner) appear.

Type the PIN and press ✓ (or Enter).

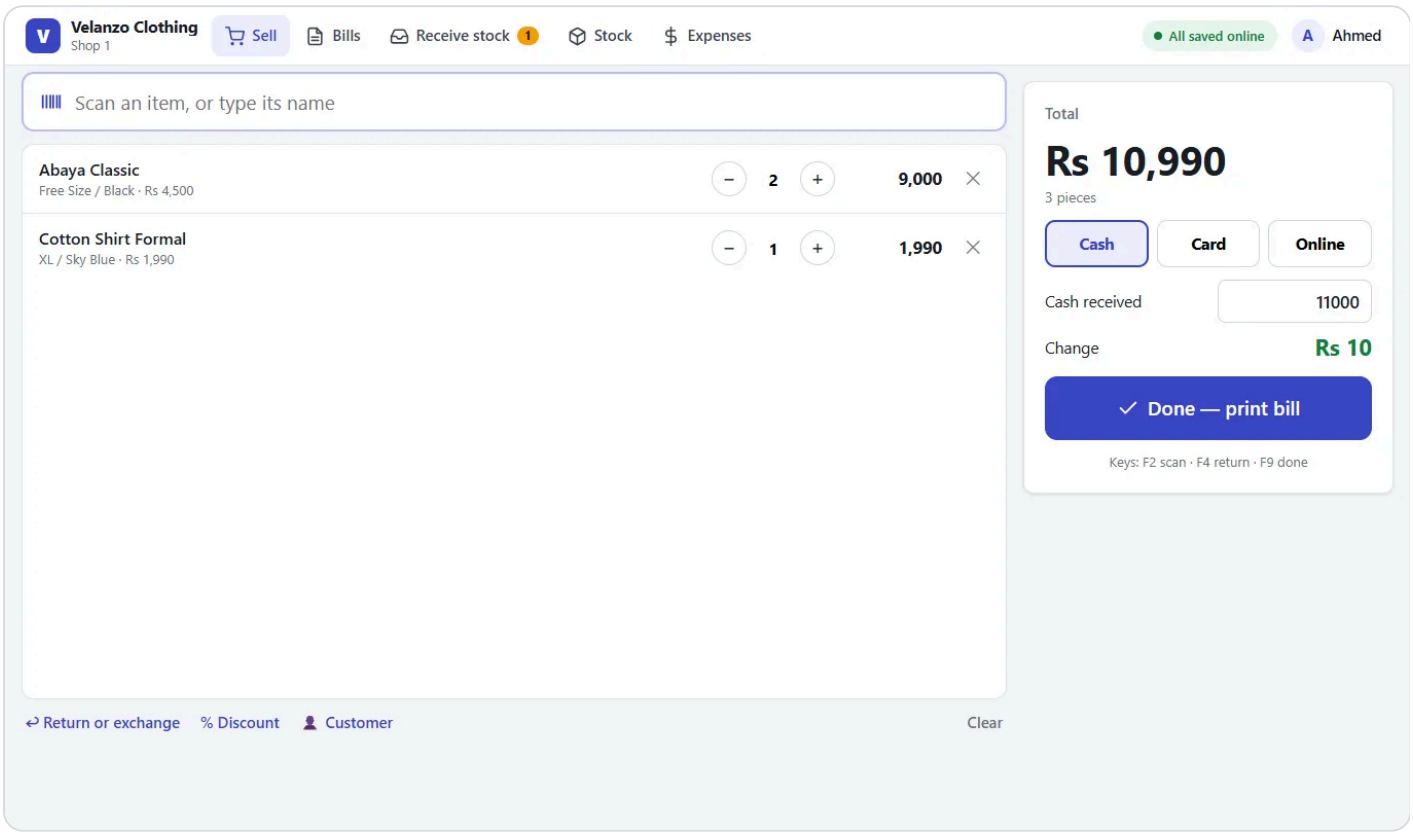

The green pill at the top tells you if everything reached the cloud:

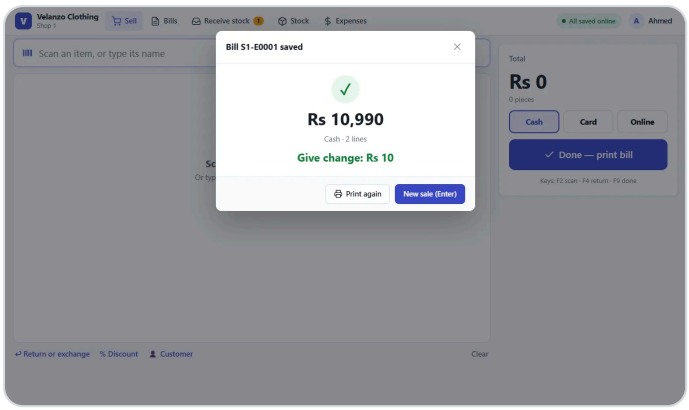

TOP BAR SAYS	MEANING
● All saved online	Everything done here is in the cloud.
● Saving… / 2 waiting	Being sent right now.
● No internet · 3 waiting	Keep working. The 3 changes go up when the internet is back.
● 1 not saved	The cloud refused a change (for example a switch was off). Tap it to see why.

4. Shop

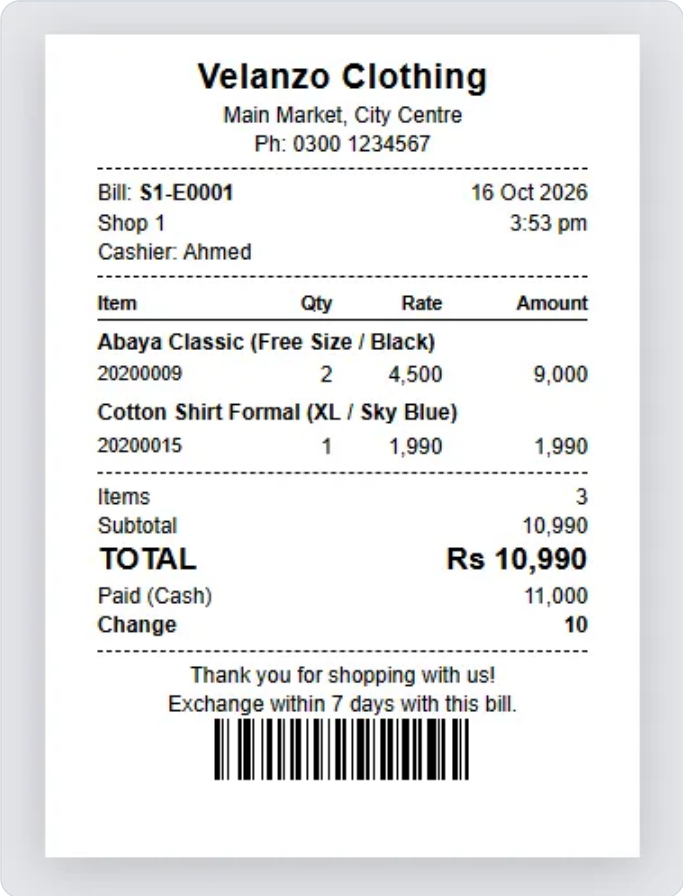

4.1 Make a bill

1. Scan each item (or type its name and press Enter). Scanning the same item again adds one more.
2. Change a number with **−** and **+**, or remove a line with ×.
3. Choose **Cash**, **Card** or **Online**. For cash, type what the customer gave: the change shows in green.
4. Press **✓ Done — print bill** (or **F9**). The bill prints.

Bill saved — with the change to give.

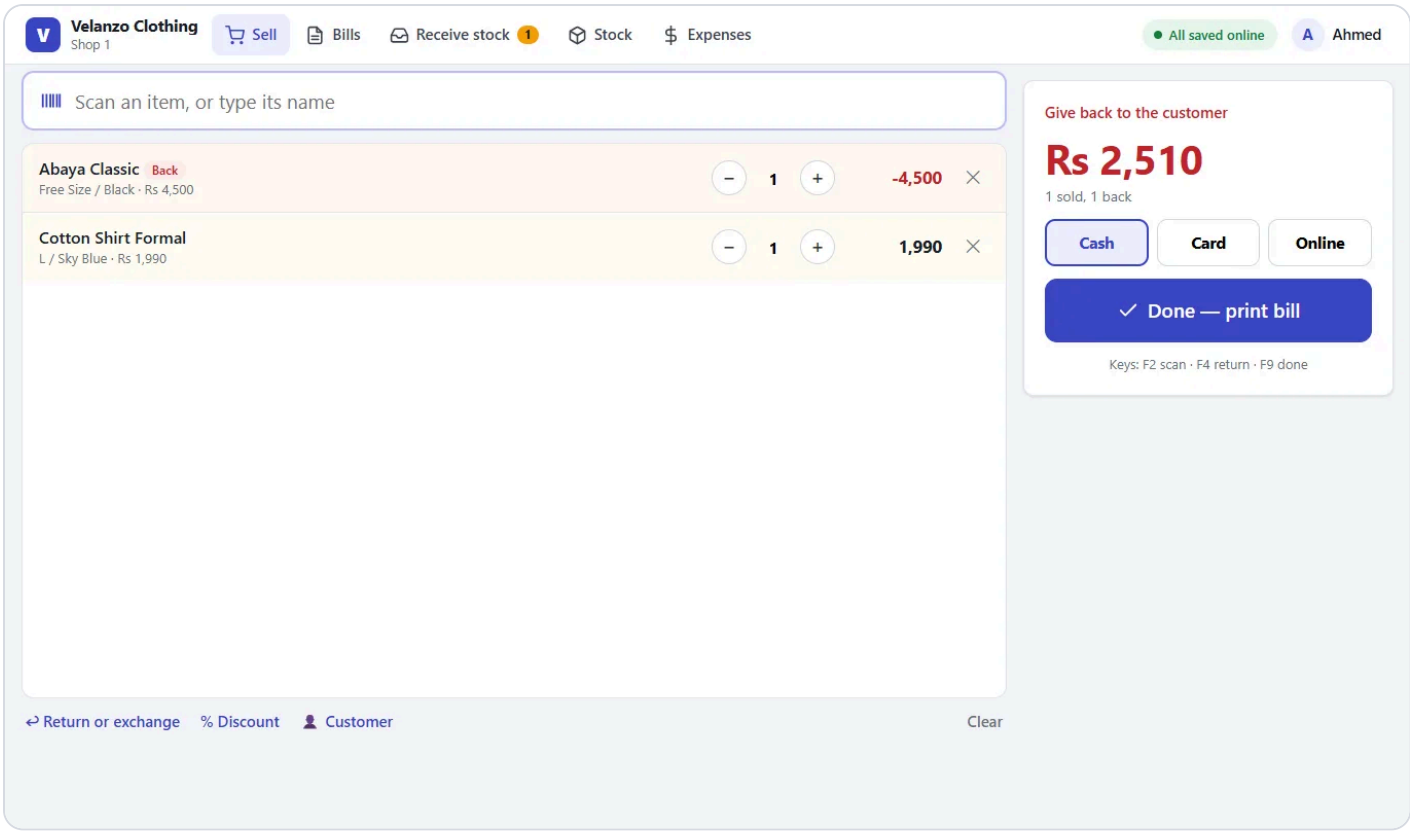

The printed bill. Its barcode finds the bill again later.

Discount and **Customer** (name and phone) are the small links under the list. They only show if your switches allow them.

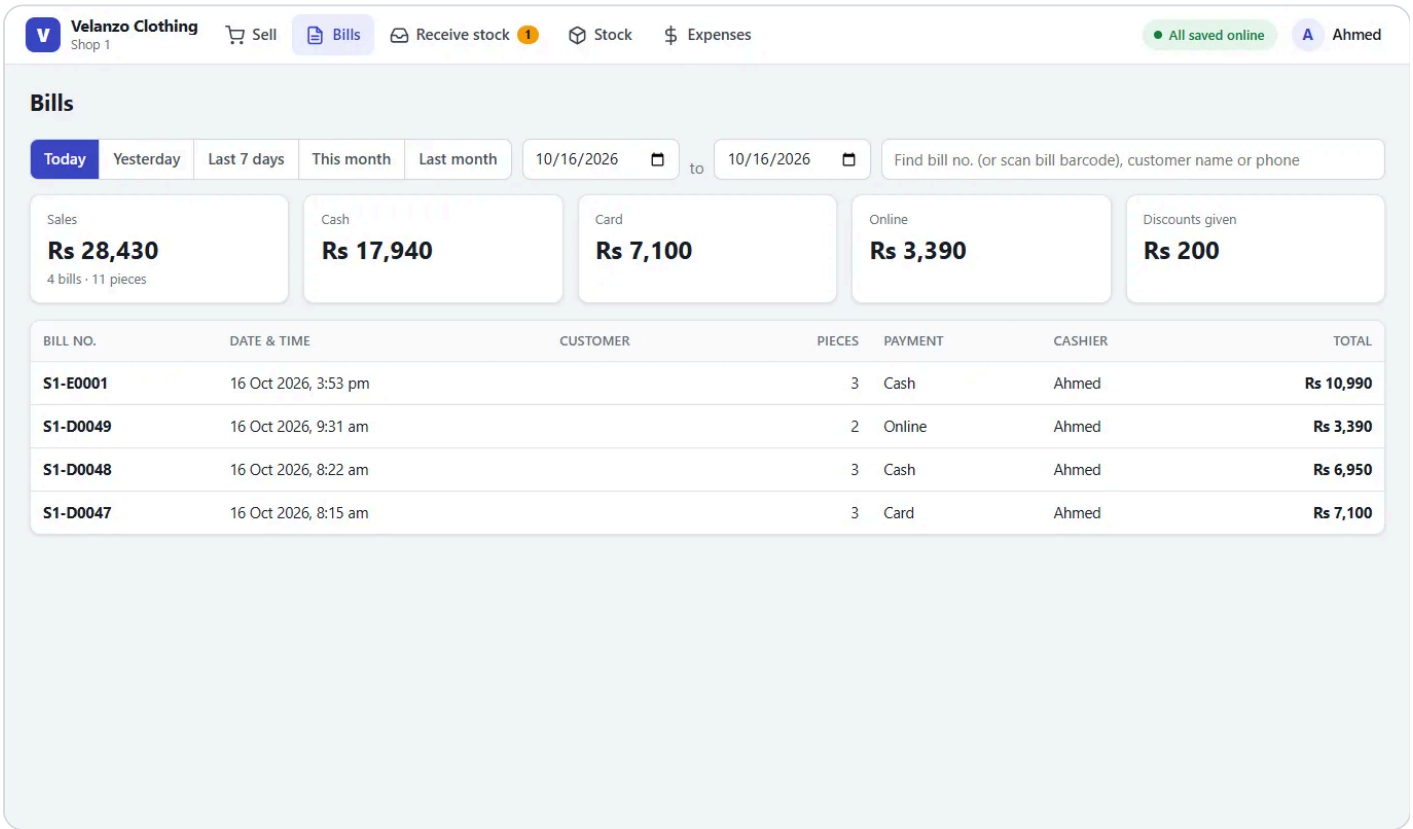

4.2 Return or exchange

1. Tap ↩ **Return or exchange** (or `F4`) and scan what the customer brings back. It shows as **Back**.
2. Tap it again and scan the new item they take, if any.
3. The total says what the customer pays, or what to **give back** (in red). Press **Done**.

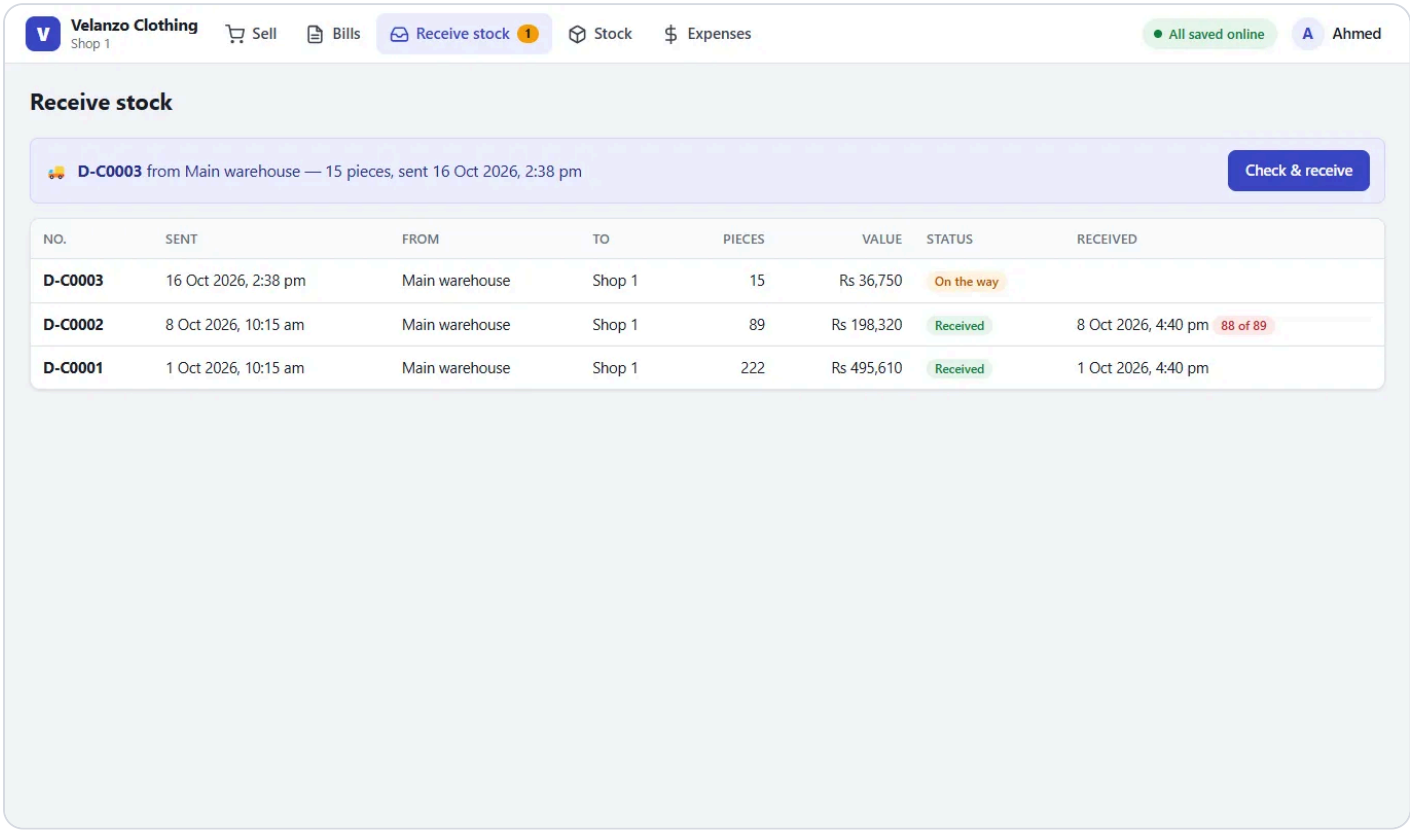

4.3 Find a bill and print it again

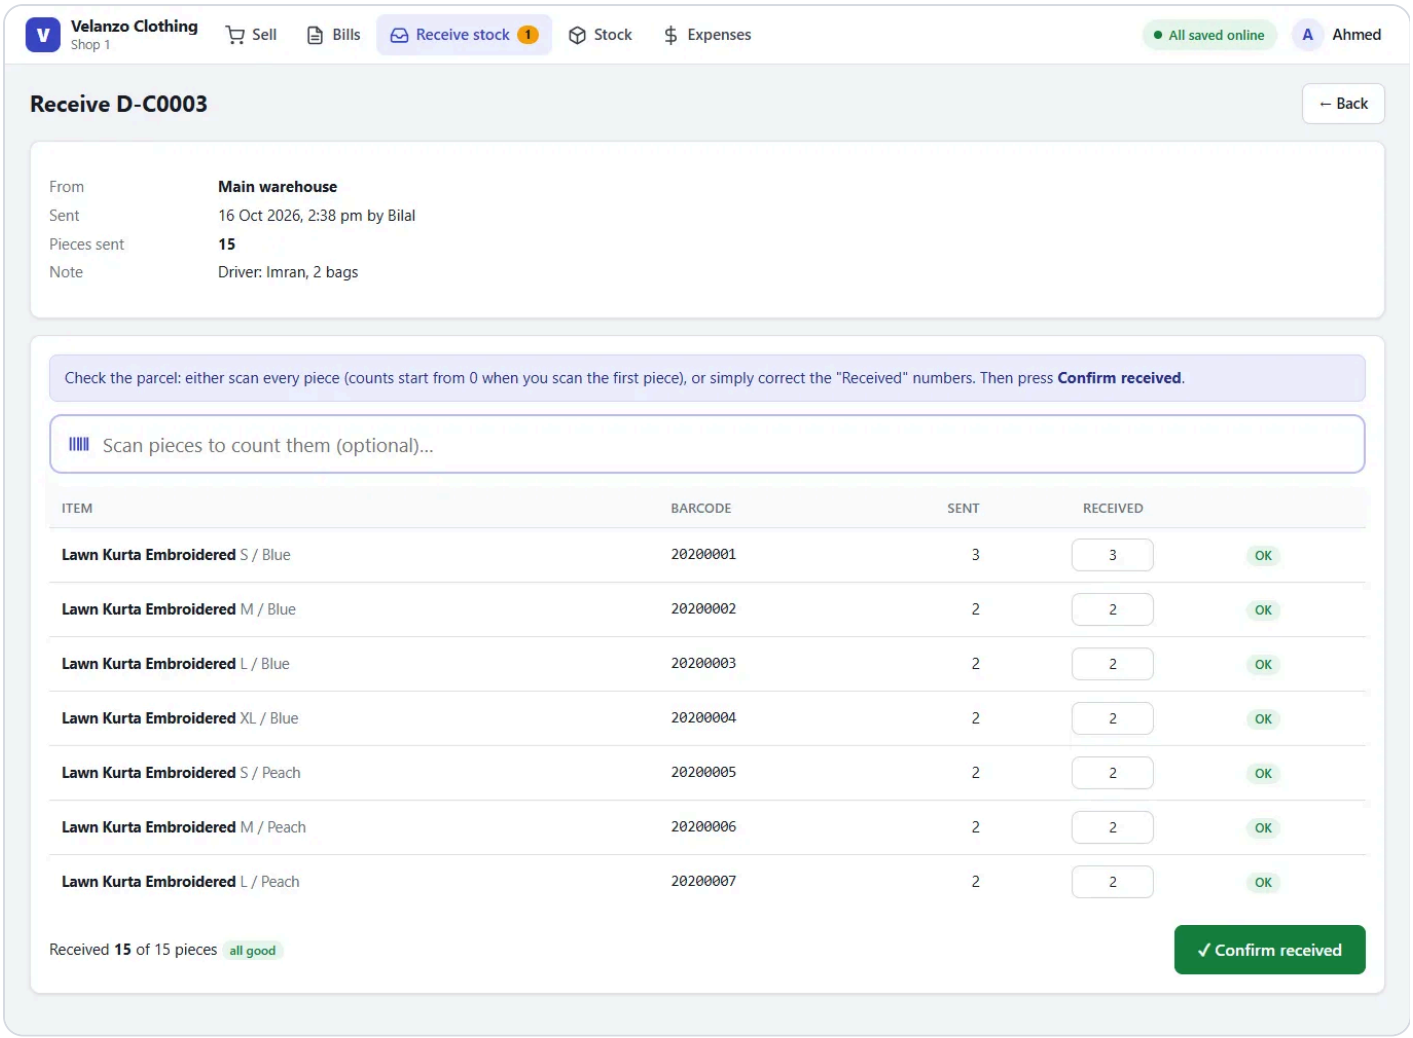

Bills: today's bills, or choose dates. Scan the barcode on the customer's bill, or type its number, name or phone. Click a bill to see it and print it again.

4.4 Receive stock

When the warehouse sends a parcel, Receive stock shows a number. Open the parcel, then either scan every piece (Velanzo counts them) or correct the **Received** numbers. Press ✓ Confirm received. Missing pieces are shown to the owner.

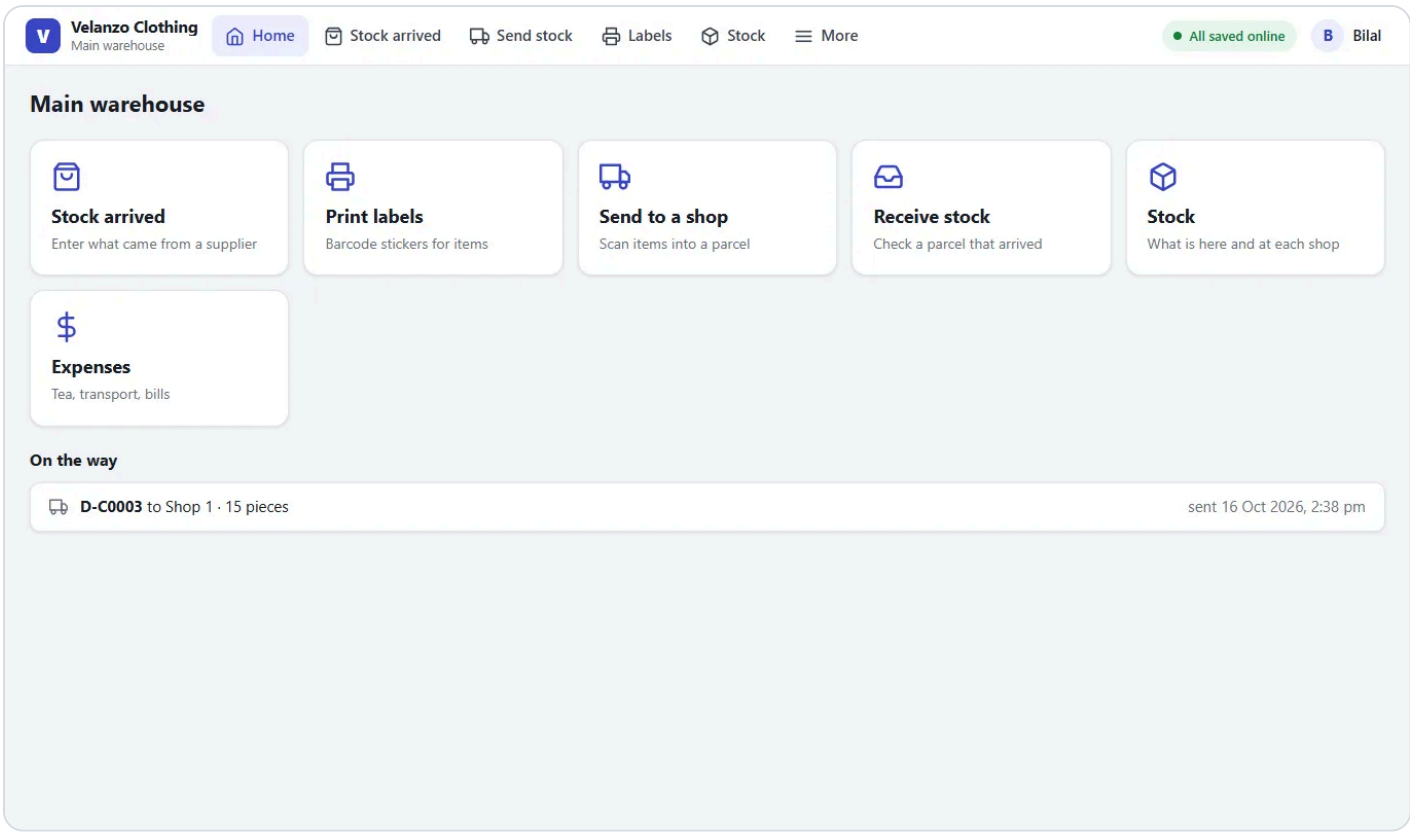

4.5 Expenses

Expenses: tea, transport, bills, rent. They are taken off the profit in the owner's reports.

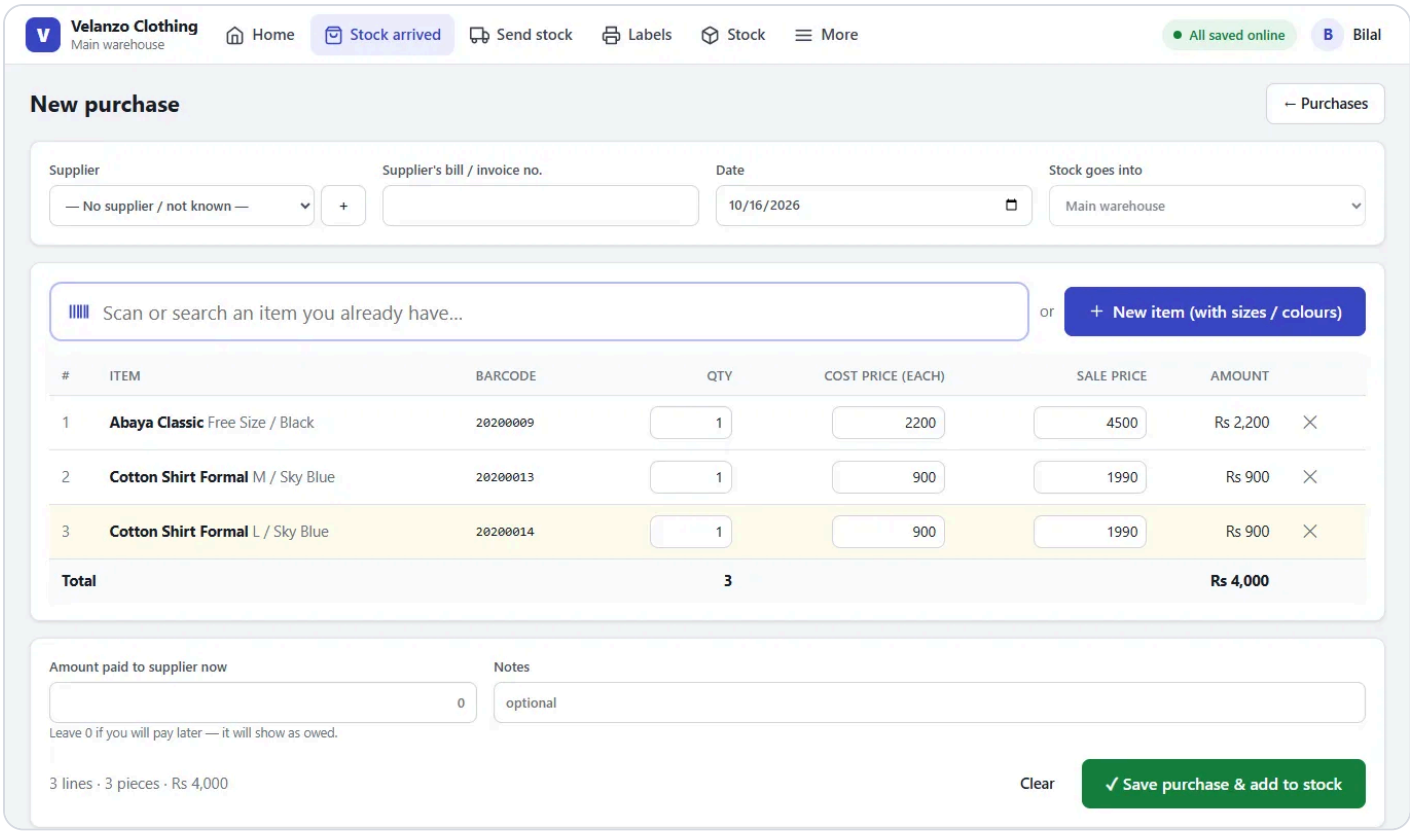

5. Warehouse

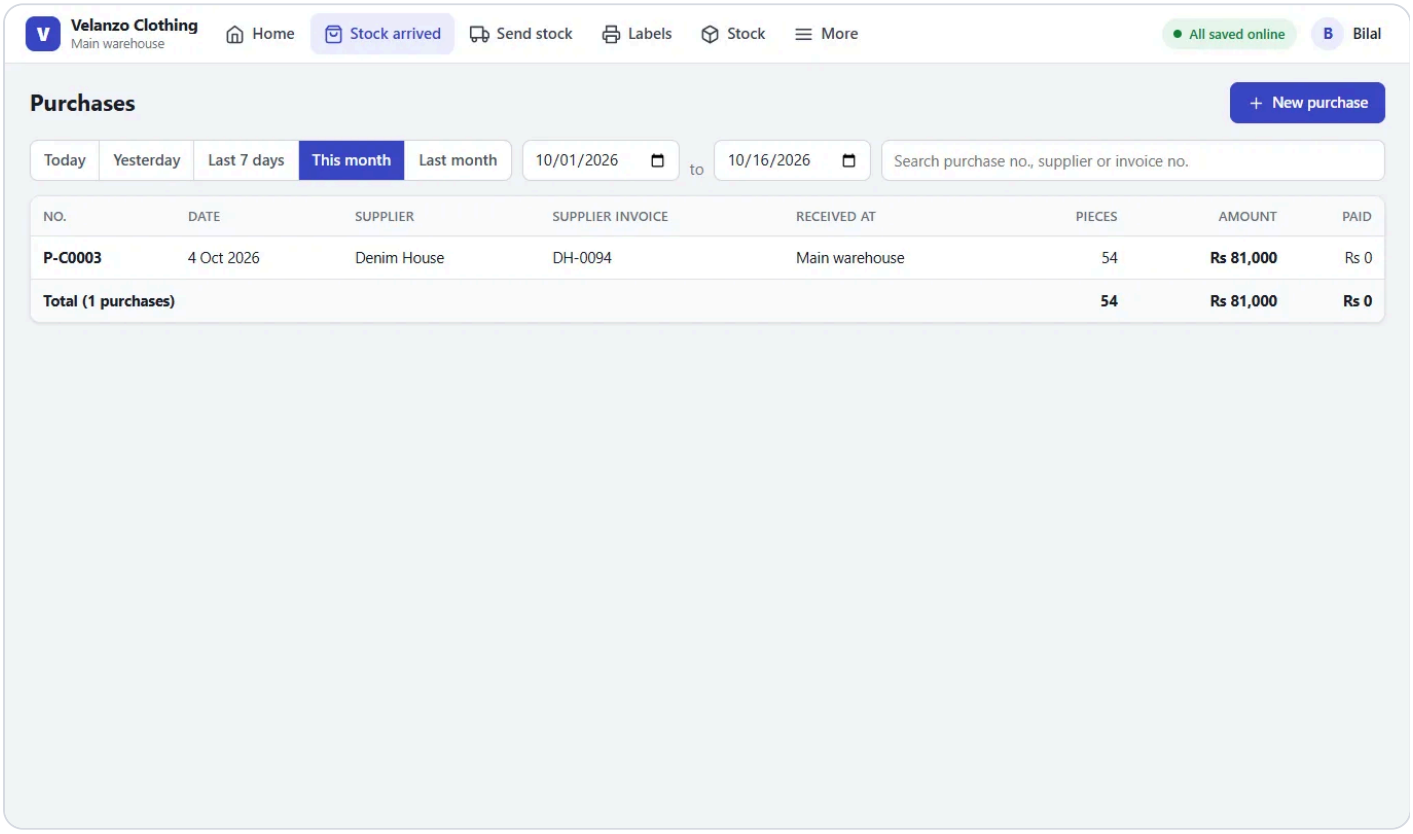

The warehouse home has one big button for each job, and shows the parcels on the way.

5.1 Stock arrived

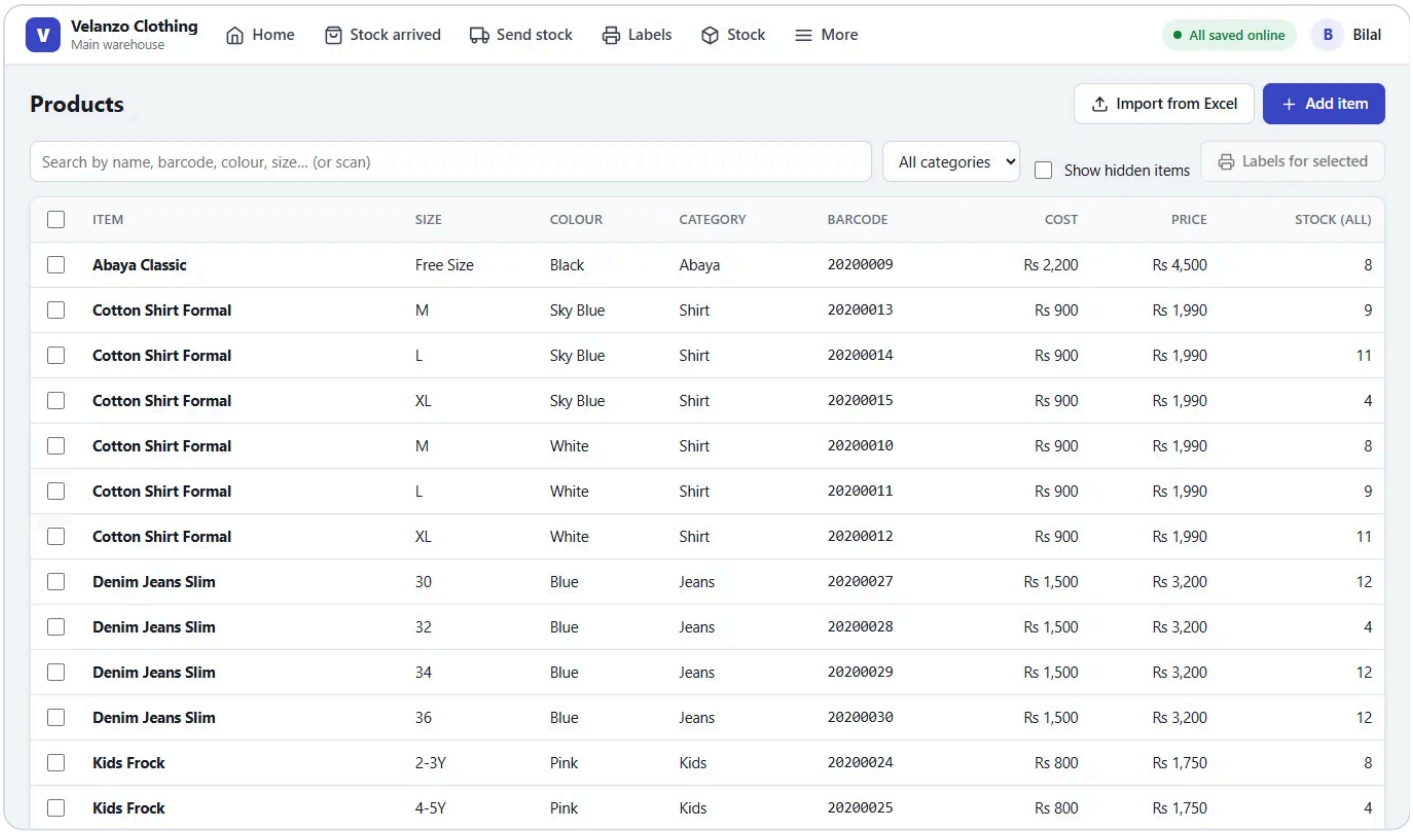

1. Stock arrived → New purchase. Choose the supplier and type their bill number.
2. Scan items you already have, or click **New item** to add a new design with its sizes and colours (Velanzo makes a barcode for each).
3. Type how many came and their cost. Type what you paid the supplier now (0 if later — it shows as owed).
4. Press Save purchase & add to stock, then print the labels.

5.2 Items

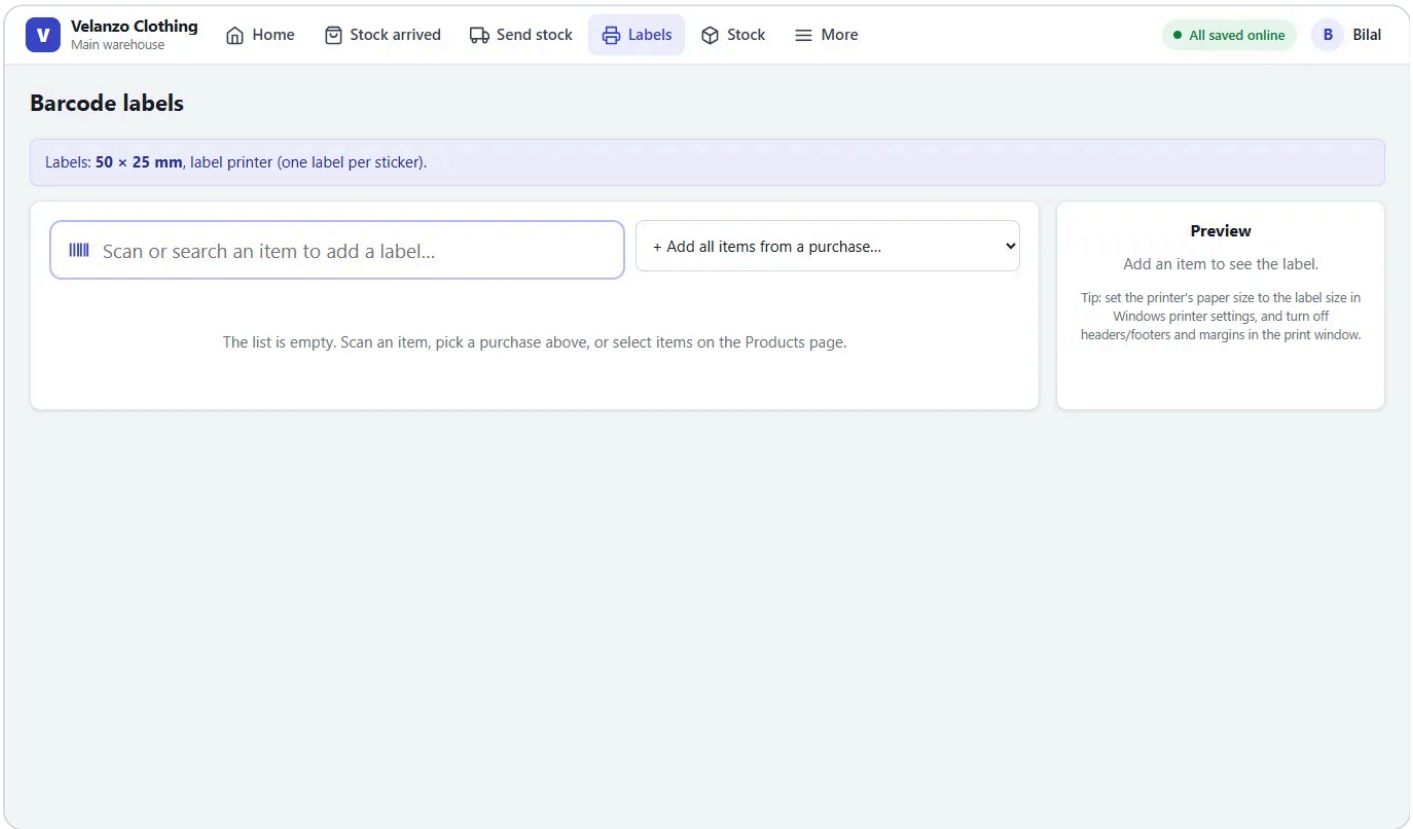

More → Items: every item with its barcode and price. Click one to change its price or see where every piece went.

ITEM	SIZE	COLOUR	CATEGORY	BARCODE	COST	PRICE	STOCK (ALL)
Abaya Classic	Free Size	Black	Abaya	20200009	Rs 2,200	Rs 4,500	8
Cotton Shirt Formal	M	Sky Blue	Shirt	20200013	Rs 900	Rs 1,990	9
Cotton Shirt Formal	L	Sky Blue	Shirt	20200014	Rs 900	Rs 1,990	11
Cotton Shirt Formal	XL	Sky Blue	Shirt	20200015	Rs 900	Rs 1,990	4
Cotton Shirt Formal	M	White	Shirt	20200010	Rs 900	Rs 1,990	8
Cotton Shirt Formal	L	White	Shirt	20200011	Rs 900	Rs 1,990	9
Cotton Shirt Formal	XL	White	Shirt	20200012	Rs 900	Rs 1,990	11
Denim Jeans Slim	30	Blue	Jeans	20200027	Rs 1,500	Rs 3,200	12
Denim Jeans Slim	32	Blue	Jeans	20200028	Rs 1,500	Rs 3,200	4
Denim Jeans Slim	34	Blue	Jeans	20200029	Rs 1,500	Rs 3,200	12
Denim Jeans Slim	36	Blue	Jeans	20200030	Rs 1,500	Rs 3,200	12
Kids Frock	2-3Y	Pink	Kids	20200024	Rs 800	Rs 1,750	8
Kids Frock	4-5Y	Pink	Kids	20200025	Rs 800	Rs 1,750	4

5.3 Barcode labels

Labels: choose a purchase (or scan items), set how many labels, and print. Stick one on every piece.

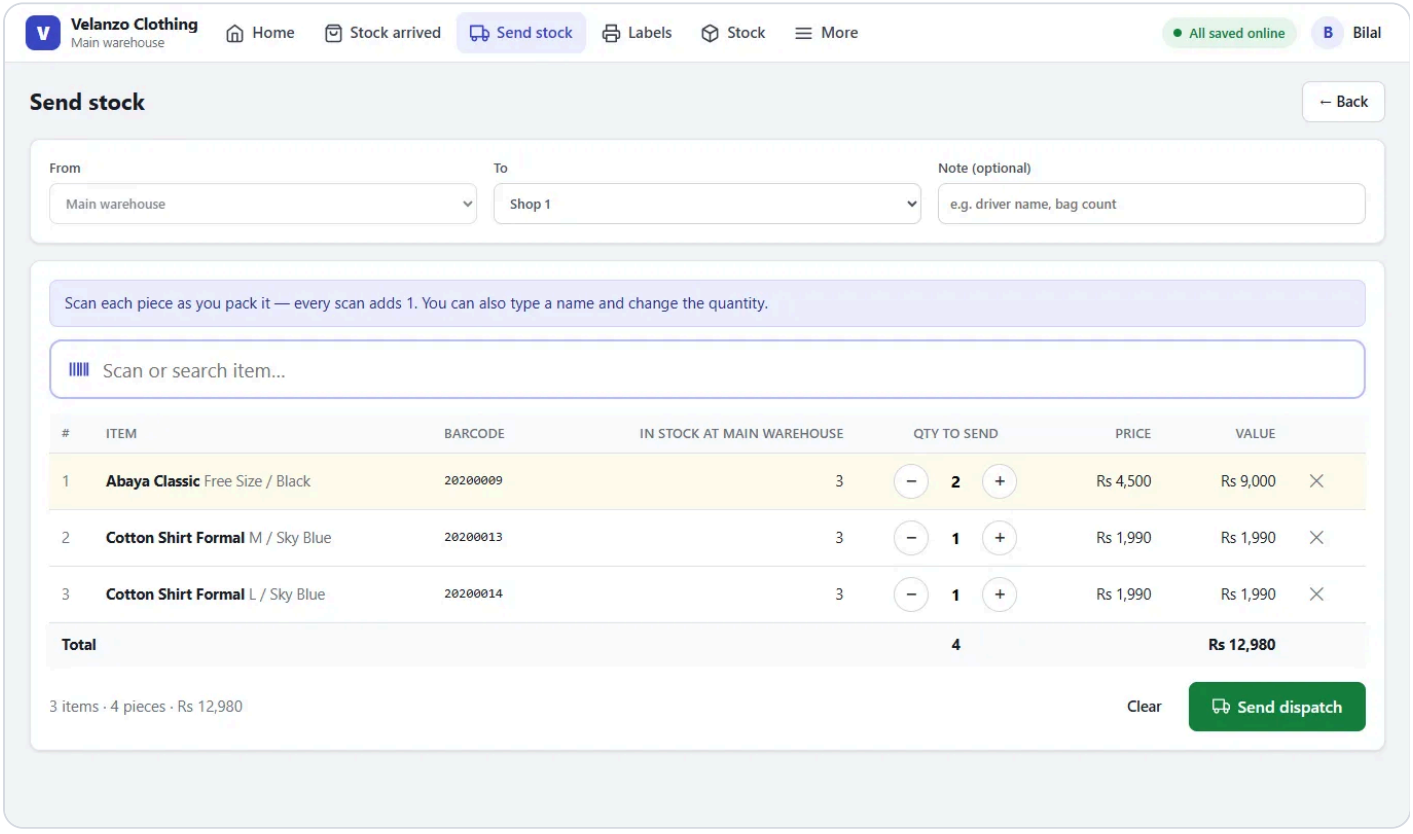

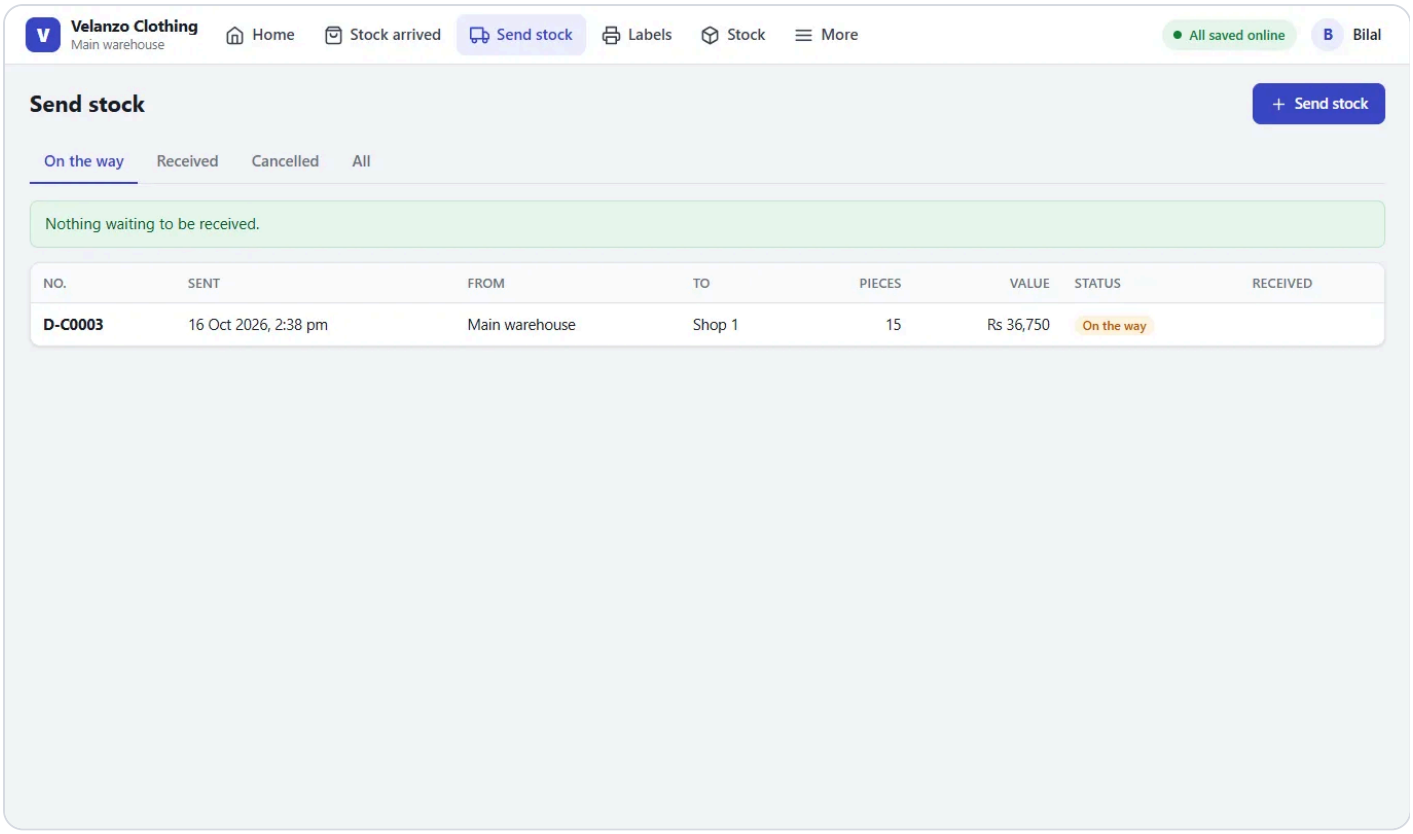

Labels: shop name, item, size/colour, barcode and price.

5.4 Send stock to a shop

1. Send stock → Send stock. Choose the shop.
2. Scan each piece as you pack it — every scan adds one.
3. Press **Send dispatch** and print the dispatch note for the parcel.

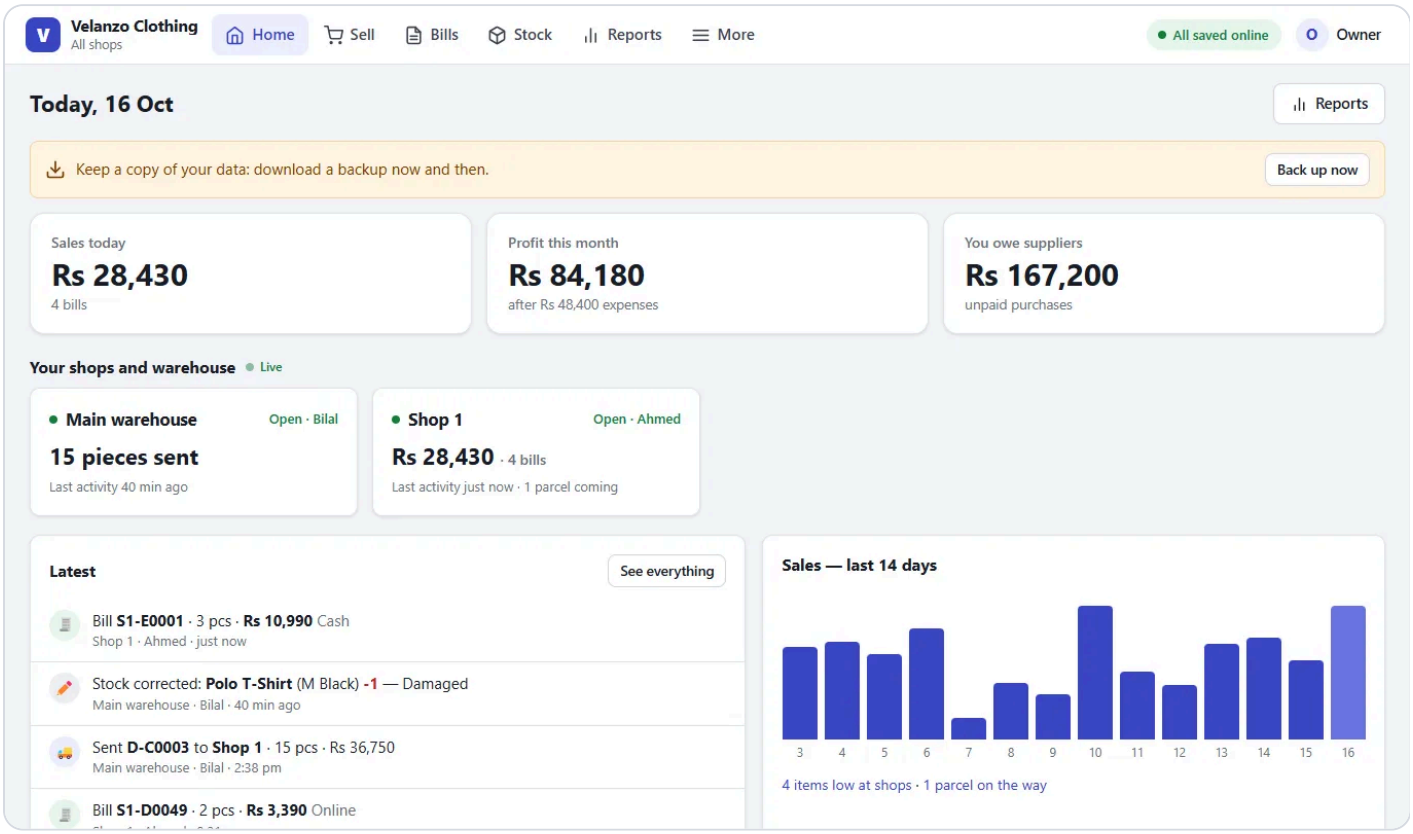

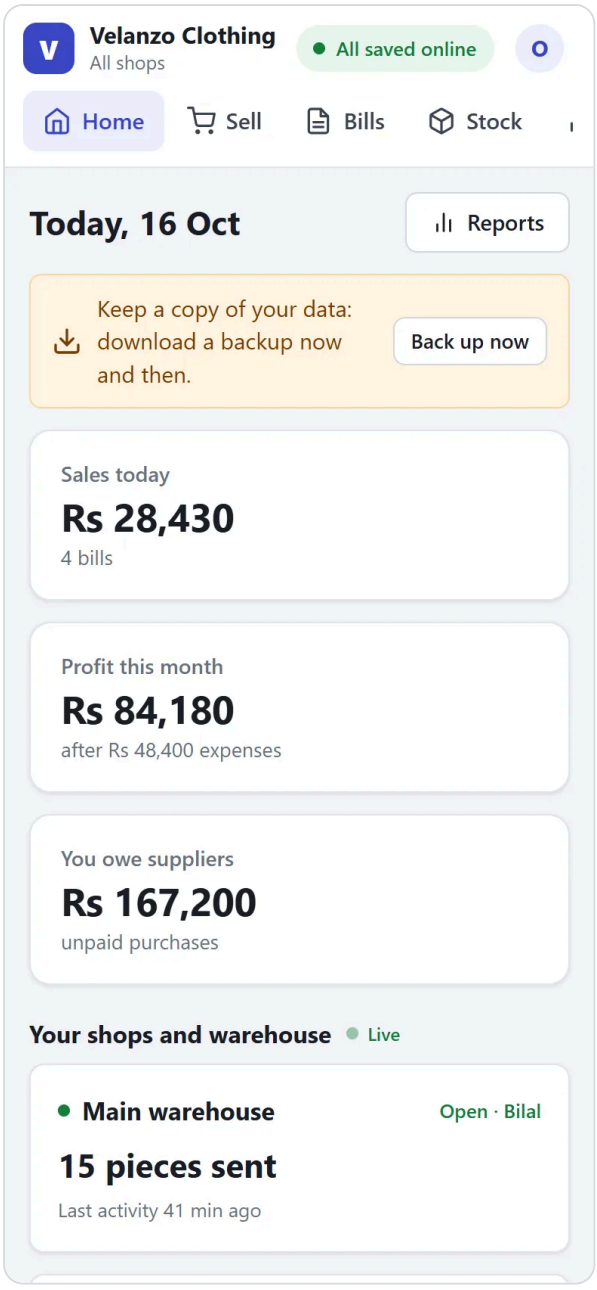

"On the way" until the shop confirms it received the parcel.

6. Owner

6.1 Home — everything live

Today's sales, this month's profit and what you owe suppliers. Below, a card for every shop and the warehouse: who is working there now, today's sales or parcels, and the last thing that happened. It updates by itself every few seconds.

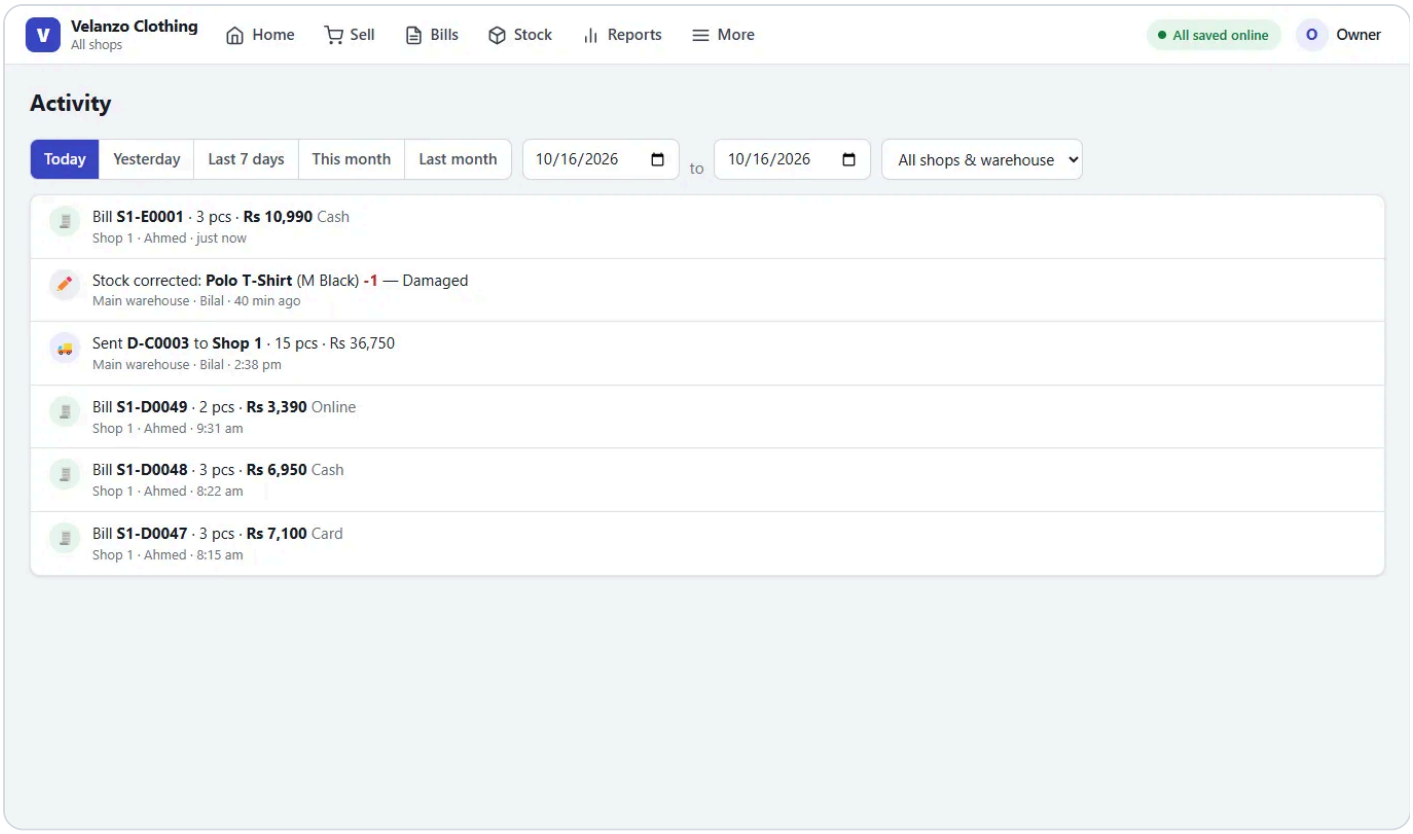

The same on your phone.

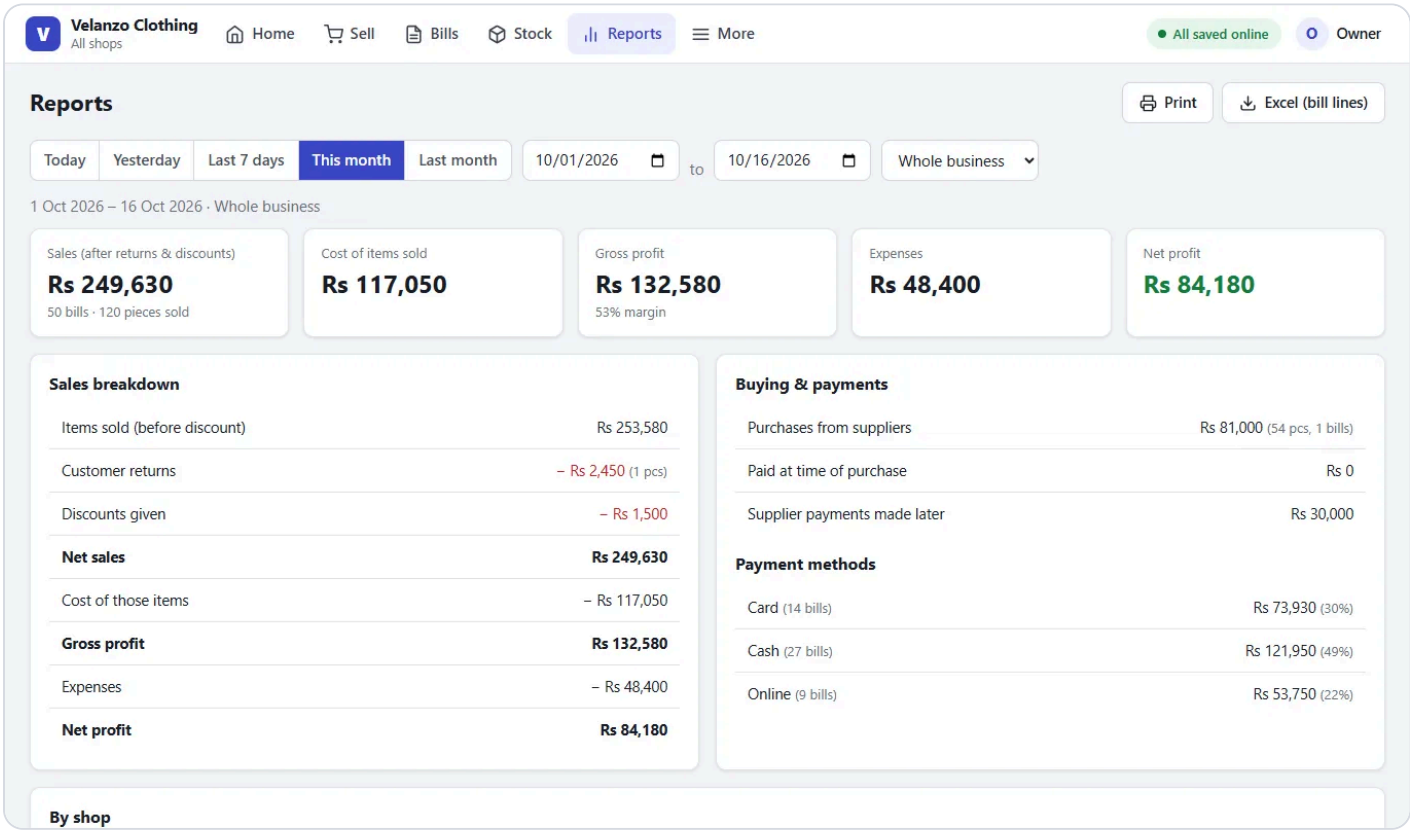

6.2 Activity

More → Activity: every bill, return, purchase, parcel, stock correction and expense, at every place, with who and when. Choose a day or a place.

6.3 Reports and profit

Reports: sales, returns, discounts, cost, profit, expenses and net profit, for any dates, for the whole business or one shop; plus best sellers, categories and day by day. **Print** it or take the bill lines to Excel.

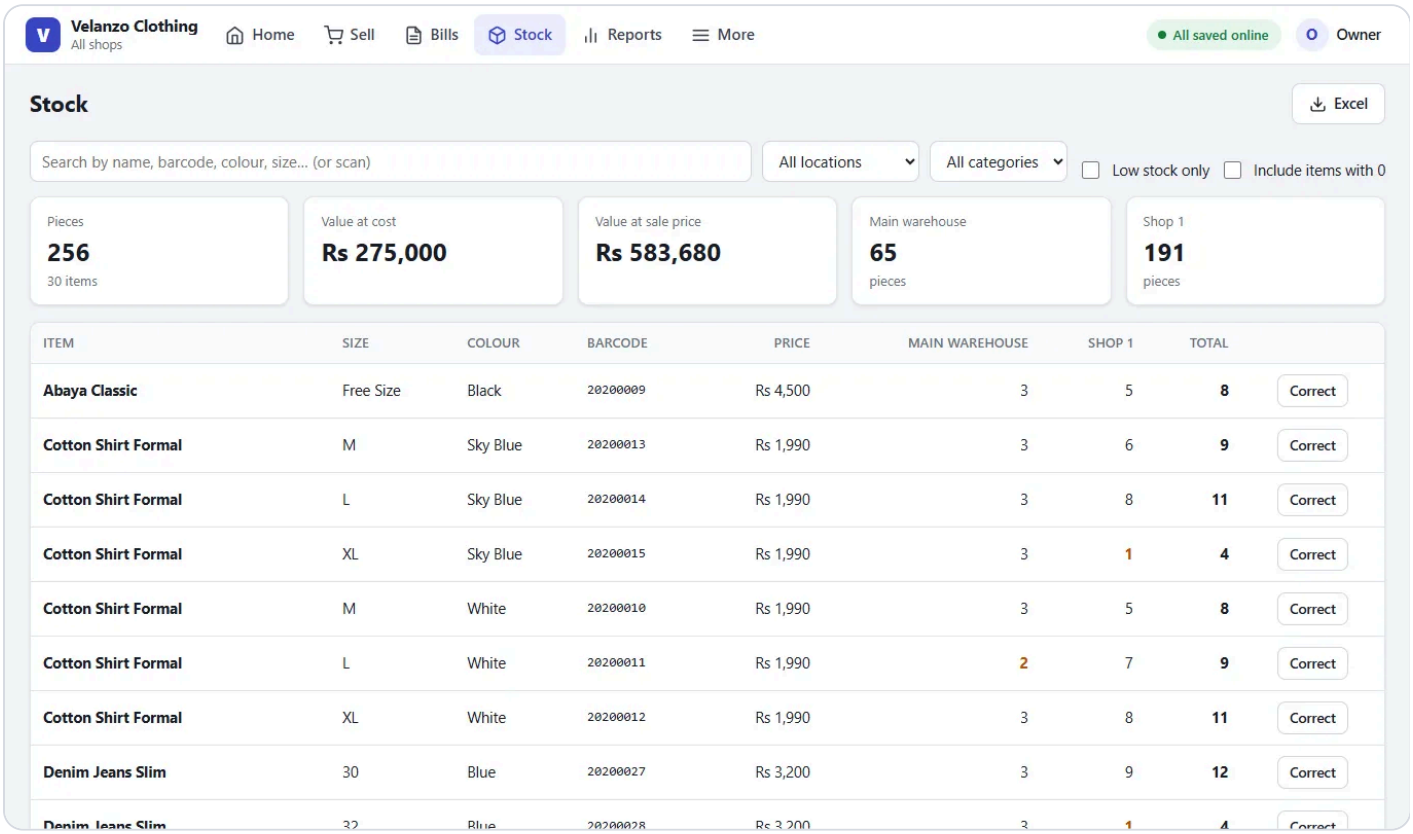

Net sales = items sold − returns − discounts

Gross profit = net sales − what those items cost

Net profit = gross profit − expenses

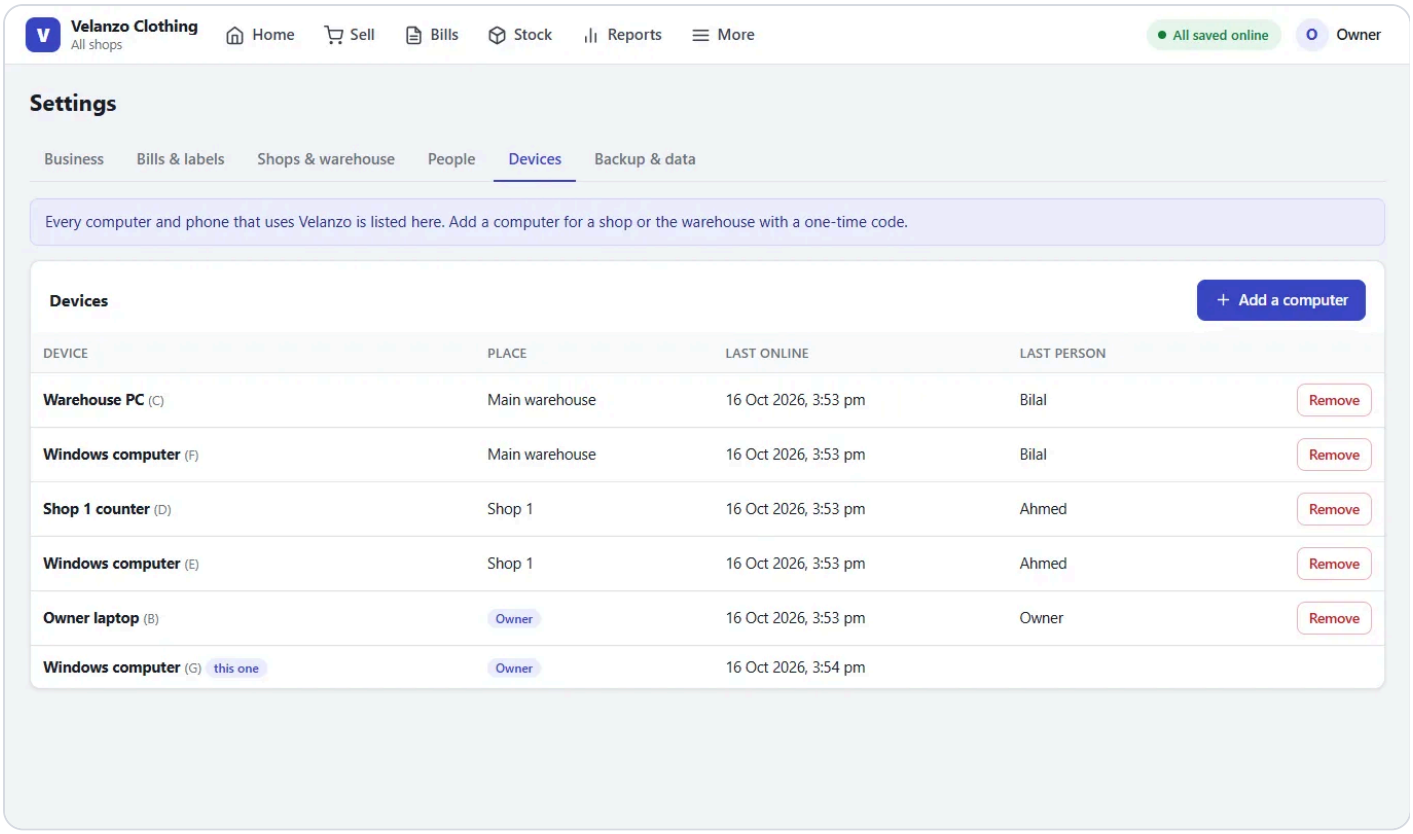

6.4 Stock and corrections

Stock: every item at every place. After counting the shelves, use **Correct** to fix a number (damaged, lost, found) with a reason — it is kept in the item's history.

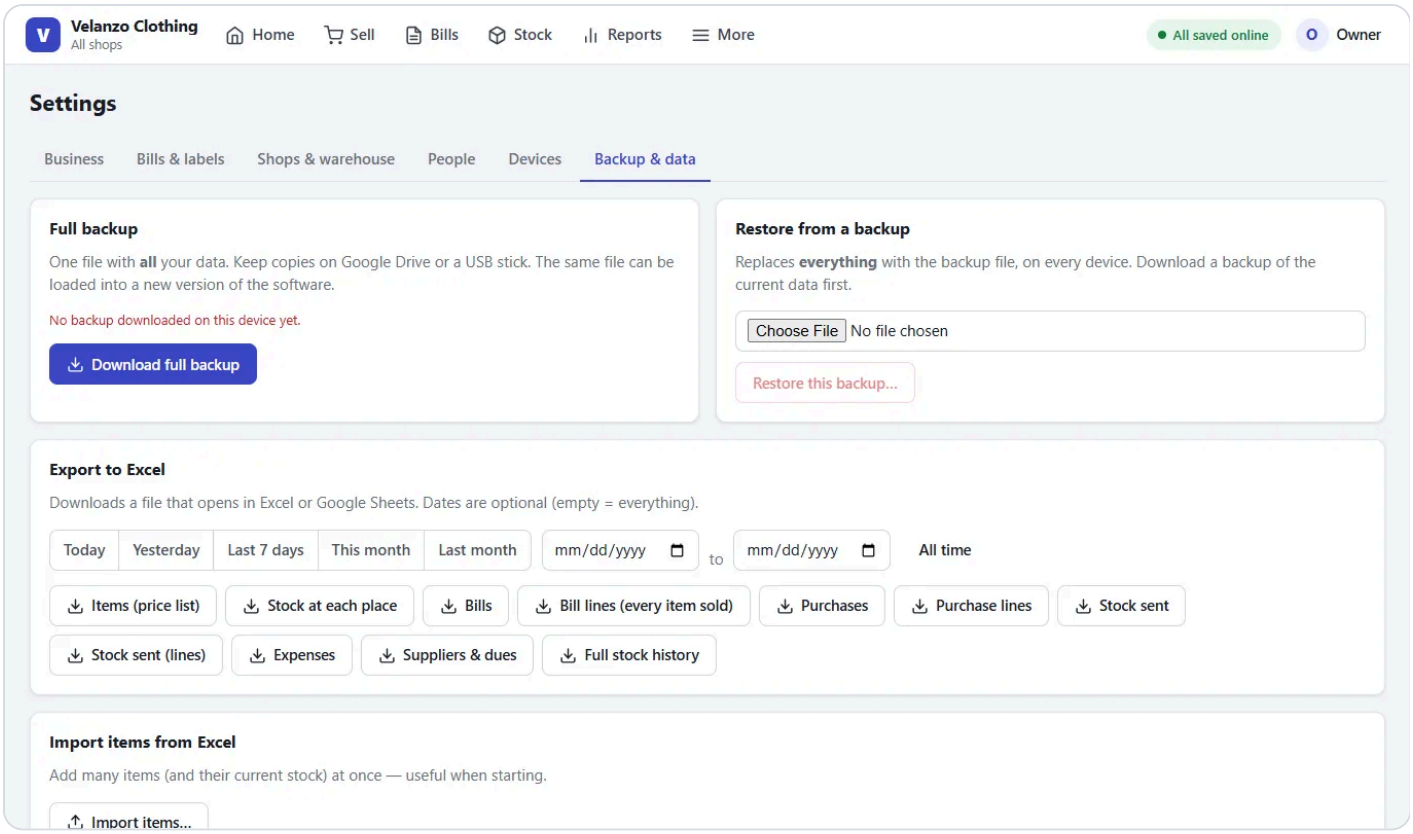

6.5 Devices

Settings → Devices lists every computer and phone, when it was last online and who used it. **Remove** a lost or replaced device: it stops working at once.

6.6 Backups and Excel

Settings → Backup & data: **Download full backup** saves one file with everything. Keep copies on Google Drive or a USB stick — Velanzo reminds you on the home screen when your last backup is more than a week old. **Restore** replaces everything (on every device) with a backup file, also one from the old version of Velanzo. You can also export items, stock, bills, purchases and more to Excel, and import many items at once.

7. No internet?

- **Keep working.** Selling, returns, receiving, stock arrived, sending parcels and expenses all work without internet.
- The top bar shows **No internet · N waiting**. When the internet is back, everything goes up by itself — you don't have to do anything.
- Other places don't see your changes until then (for example the owner's sales total, or a parcel you sent).
- **Don't clear the browser's data** and don't remove Velanzo while something is waiting — it would be lost. Installing Velanzo (2.5) protects it.
- The very first set-up of a computer needs the internet once.

8. Printers and scanners

Barcode scanner

Any USB scanner works — it types the barcode and presses Enter, like a keyboard. Plug it in and scan into the box on the Sell screen.

Receipt printer (shop)

Set the 80 mm (or 58 mm) receipt printer as the **default printer** in Windows. In the print window choose **Margins: None** and untick **Headers and footers** once.

Print without the print window: make a shortcut for Chrome and add `--kiosk-printing` at the end of its **Target**, after the Velanzo address. Bills then go straight to the default printer.

Label printer (warehouse)

In the printer's Windows settings, make a paper size the same as your labels (for example 50 × 25 mm), and type the same size in Settings → Bills & labels. A normal printer with A4 sticker sheets also works.

9. Daily checklists

Shop

- ☐ Open Velanzo, tap your name, type your PIN.
- ☐ Check **Receive stock** for parcels.
- ☐ Sell; keep the bills' copies if you need them.
- ☐ Add today's expenses.
- ☐ Before leaving: the top bar says **All saved online**.

Warehouse

- ☐ Enter everything that arrived (**Stock arrived**).
- ☐ Print and stick labels.
- ☐ Send parcels; print the dispatch note.
- ☐ Before leaving: **All saved online**.

Owner

- ☐ Look at Home: is every shop open and selling?
- ☐ Parcels with missing pieces? (Activity)
- ☐ Once a week: download a backup.

10. Problems and questions

Someone forgot their PIN

Owner: Settings → People, open the person, type a new PIN.

A computer was lost, stolen or replaced

Settings → Devices → Remove. On the new computer, connect it with a new code (2.4).

The top bar is red: "1 not saved"

Tap it. You will see what the cloud refused and why — usually something switched off for that place or person. Do it again on a device where it's allowed, then clear the list.

"Velanzo is already open in another tab"

Velanzo can be open only once on a computer. Close the other tab or window.

A new shop opens

Settings → Shops & warehouse → Add a place, add its people, then connect its computer (2.4).

Long barcodes look like 8.9E+12 in Excel

Format the barcode column as **Text** before saving a file to import.

Starting again on a computer

your name → This device: **Download everything again** (keeps nothing waiting behind), or **Remove Velanzo from this device**.
